## 2. MACROECONOMIC OPERATING CONDITIONS IN THE PERIOD FROM 31.12.2012 TO 30.06.2013

Year-on-year inflation rate (rise in consumer prices) recorded a decrease in the first six months of 2013. However, despite this decreasing trend, the year-on-year inflation in June (9.8%) considerably exceeded the upper limit of allowed departure from the value set in the NBS Memorandum on establishing a targeted inflation rate by 2014. ( 5.5%).

In the first four months this year, RSD depreciation, which started at the end of the previous year, was halted. RSD exchange rate stabilized at the value of approx. 111 dinars to the euro. During May and June this year there was a new depreciation in the value of the dinar. At the end of June this year the dinar depreciated against the euro by 0.4% compared to the value from the end of the previous year.

For the purpose of mitigating the inflationary pressure, which was particularly strong in the third and fourth quarter, the NBS raised its key-policy rate from 11.25% to 11.75% in the period December 2012 - February 2013. Apart from mitigating the inflationary expectations, this new rate should also contribute to macroeconomic stability. In May this year NBS key-policy rate was reverted to 11.25% and was additionally lowered in June to 11.0%.

The growth that the banking sector in the Republic of Serbia recorded in 2012 (8.7%) is considerably lower than the four-year average from the previous years (13.2%), while in the first three months of the current year there was a decrease in balance-sheet assets of 0.8%.

In 2012 there was a slight increase in the Bank's share in the total balance-sheet assets of the banking sector. By the end of March 2013 the Bank's share increased to 11.8%. During the observed period the Bank's market share in banking sector assets increased by 2.2 percentage points.

Year-on-year inflation rate from 2012 to 30.06.2013 in %

EUR/RSD exchange rate from 2012 to 30.06.2013 in RSD

Assets per employee in 000 EUR	1,000	1,018	1,007	1,001	954

As of 30.06.2013 the Bank's balance-sheet assets stood at RSD 344,790.9 million and had been increased by RSD 20,603.2 million or 6.4% compared to the end of the previous year.

Off-balance sheet assets increased by 5.5% in 2013 and stood at RSD 215,861.3 million at the end of June this year.

In the first six months of 2013 the Bank granted loans to customers in the amount of RSD 184,680.3 million, which is 4.3% more than the figure achieved at the end of 2012. At the same time the Bank maintained a relatively low share of NPL in total loans (13.2%). In the same period the Bank achieved a slight rise in deposits from customers of 3.9%, despite a rise in deposits by banks and other financial organizations in the total amount of RSD 3,134.4 million and retail FX savings of EUR 29.9 million. The positive effect of the rise in FX savings and deposits from banks and other financial organizations were accompanied by a growth of corporate loans (RSD 1,522.4 million).

Operating profit in 000 RSD

Profitability indicator in %

Despite the negative effect of the global financial crisis, the Bank achieved a significant growth of profitability (13.6%) in the first six months this year, compared to the same period the previous year. From 01.01 to 30.06. 2013 the Bank realized a profit of RSD 2,582.5 million, which is a year-on-year increase of RSD 308.1 million. Such considerable increase in profitability resulted in return on total capital of 8.4% in the first six months of 2013 and return on share capital of 12.9%.

What made the greatest contribution to the increase in profit in the first six months of 2013 was the rise in net interest income (21.1%) and net fee income (2.0%).

Decrease in the number of employees, accompanied by an increase in the volume of business, improved the Bank's ratio of assets to employees. In the first six months of 2013 assets per employee rose from RSD 108.5 million (31.12.2012) to RSD 114.2 million as at 30.06.2013.

Cost Income Ratio decreased from 64.9% as of 30.06.2012 to 60.0% as of 30.06.2013 (decrease of 4.9 percentage points) thanks to the decrease in expenses and increase in net fee and interest income.

In the first six months of 2013 the Bank's balance-sheet assets increased by RSD 20,603.2 million or 6.4%. Loans to customers increased by RSD 7,573.5 million or 4.3%. As of 30.06.2013 total loans to customers amounted to RSD 184,680.3 million, which is 53.6% of the total balance-sheet assets.

In the first six months of 2013 cash and cash equivalents recorded a decrease of 25.9% primarily due to the decrease of funds on the drawing account and the withdrawal of funds from FX accounts.

Callable deposits and loans recorded a significant increase in the reporting period of the current year, an increase in the amount of RSD 18,780.8 million or 43.6%, as a result of the Bank's greater investment in repo securities (+ RSD 18,000.00 million) and an additional amount of FX required reserve in RSD equivalent of RSD 780.8 million.

Receivables for interest fee and sale recorded a growth in the reporting period of RSD 327.1 million or 21.1%.

<b>II</b>	<b>COMMISSION OPERATIONS AND OFF-BALANCE SHEET ITEMS</b>	<b>215,861,257</b>	<b>204,642,280</b>	<b>105.48</b>	

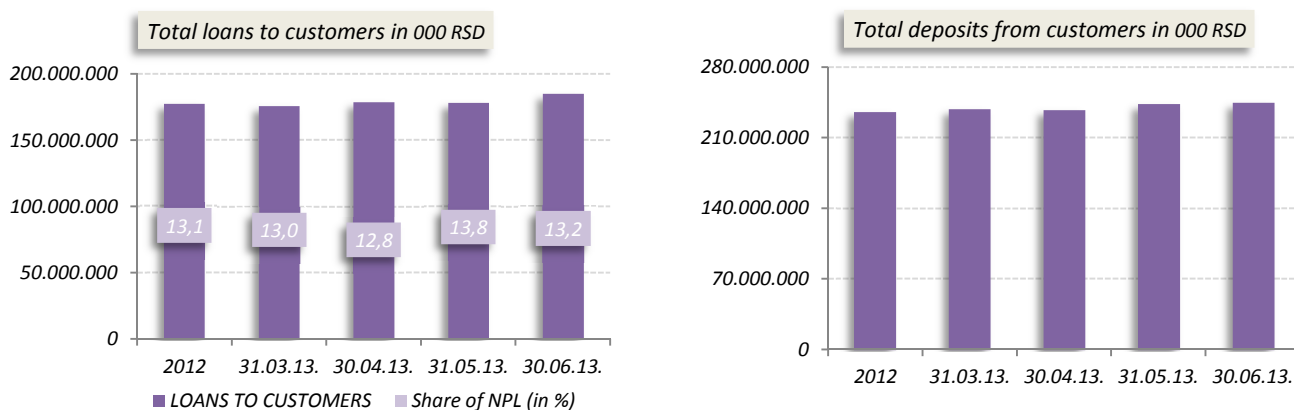

At the end of the first six months of 2013 total liabilities stood at RSD 282,648.8 million and accounted for 82.0% of total liabilities (31.12.2012: 81.5%). Concurrently, total capital, in the amount of RSD 62,142.2 million accounted for 18.0% (31.12.2012: 18.5%) of total liabilities. Compared to the end of the previous year, total liabilities increased by RSD 18,327.5 million or 6.9%, while the total capital increased by RSD 2,275.6 million or 3.8%.

Apart from the other deposits, which increased in the reporting period by RSD 1,447.8 million or 0.7%, a considerable increase from the end of the previous year (RSD 7,639.0 million or 18.9%) was recorded by transaction deposits and other liabilities (growth of RSD 9,437.1 million, 37.0%). FX liabilities account for the largest share of other liabilities – credit lines (RSD 21,523.1 million) and subordinated loan (RSD 5,708.6 million) drawn down at the end of November 2011 for the purpose of increasing regulatory capital.

In the first six months this year there was an increase in credit lines from abroad in net equivalent of RSD 7,303.5 million (EUR 86.3 m drawn, EUR 6.3 m and CHF 20.0 m repaid).

Deposits from customers (transaction and other deposits) account for RSD 244,607.6 million of balance-sheet liabilities i.e. 70.9% of total balance-sheet liabilities, which is a rise from the beginning of the year of RSD 9,086.9 million or 3.9%.

#### 4.3. Loans to Customers and Deposits from Customers as at 30.06.2013

The most important assets category, loans and deposits to customers, recorded an increase of RSD 7,573.5 million (+ 4.3%), as well as a change in its share in total assets from 54.6% (31.12.2012) to 53.6%. Loan increase rate is negligible, whereas the dinar depreciated by 0.4% in the same period, which shows that in the first six months this year the Bank achieved a real growth of loans and deposits to customers in the amount of approx. RSD 7,150.0 million.

At the end of June 2013 the Bank's total deposits stood at RSD 244,607.6m and account for 70.9% of the Bank's total liabilities (December 2012: 72.6%). Compared to the end of last year, the Bank's total deposits increased by RSD 9,086.9 million (3.9%), while other deposits increased by RSD 1,447.8 million or 0.7%, and transaction deposits increased by RSD 7,639.0 million or 18.9%. If we exclude the effects of RSD depreciation on FX deposits and on RSD deposits with currency clause (RSD 718.0 m), total deposits recorded a growth in real terms of RSD 8,368.9 bn.

Rise in deposits in the first six months of 2013 came primarily as a result of an increase in retail FX savings (EUR 29.9 million).

NOTE: Deposits also include transaction deposits.

As of 30.06.2013 the Bank's total loans to customers stood at RSD 184,680.3 million, which is a decrease from the end of the previous year of RSD 7,573.5 million or 4.3%. At the end of the second quarter 2013 the level of loans and deposits to customers was considerably affected by corporate loans which reached RSD 116,317.9 million at the end of June.

FX savings from 2012 to 30.06.2013 in 000 EUR

With its reputation as a safe and stable bank in the Serbian banking market, the Bank managed to increase FX savings deposits by RSD 29.9 million or 2.3% in the observed period.

Despite severe economic crisis, FX savings rose in the first six months of 2013 and reached EUR 1,351.1 million.

Depositors' trust enabled the Bank to retain its leading position in the Serbian banking sector in terms of volume of FX savings, image and recognizability.

#### 4.4. Commission Operations and Off-Balance Sheet Items in 2013

(IN 000 RSD)

No.	ITEM	BALANCE 30.06.2013	BALANCE 31.12.2012	Index (2:3)*100

## 5.1. Interest Income and Expenses

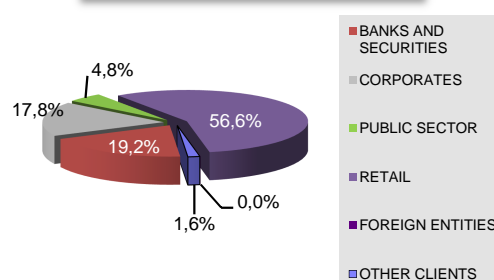

Interest gains amounted to RSD 6,127.6 million, which is a year-on-year increase of 21.1%.

Interest income increased by RSD 997.6 million year-on-year or 10.3%, while interest expenses decreased by RSD 69.3 million or 1.5%.

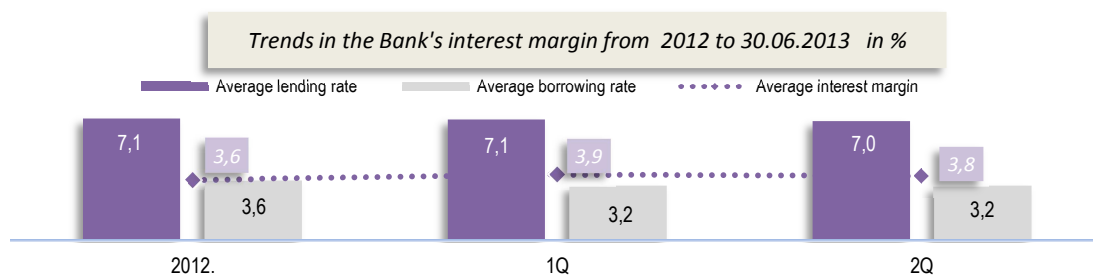

*Interest income by division as at 30.06. 2013*

*Interest expenses by division as at 30.06.2013*

Corporate interest income accounts for the largest share of interest income (RSD 4,641.1 million or 43.5%), while retail deposit interest accounts for the largest share of interest expenses (RSD 2,568.6 million or 56.6%), which is mostly a result of received FX savings.

At the end of the second quarter 2013 average lending rate reached 7.0% and average borrowing rate reached 3.2%. As a result, in the second quarter 2013 the Bank's average interest margin was 3.8%.

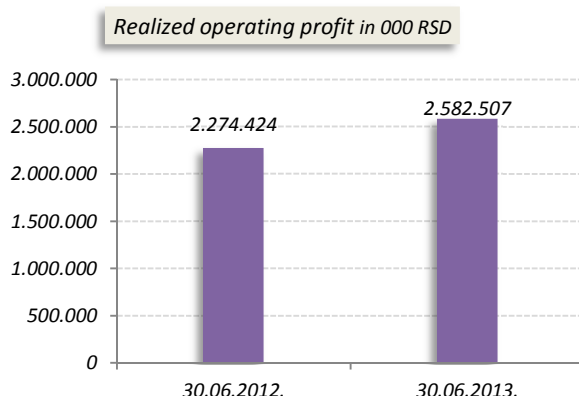

## 5.2. Fee Income and Expenses

Compared to the previous year, fee and commission income was higher by RSD 149.2 million or 6.0%, while fee and commission expenses increased by RSD 107.4 million or 31.0%.

In the first six months of 2013 fee and commission gains reached RSD 2,168.7 million and were higher than in the previous year by 2.0%.

## 5.3. Realized Operating Profit

Despite adverse and unpredictable macroeconomic operating conditions and recession both in the Serbian economy and abroad, the Bank realized an operating profit of RSD 2,582.5 million in the period between 01 January and 30 June 2013, which was a year-on-year increase of 13.6%.

Such an increase in realized operating profit resulted in return on total capital of 8.4% and return on share capital of 12.9% in the first six months of 2013.

### PERFORMANCE INDICATORS PRESCRIBED BY THE LAW ON BANKS

No.	ITEM	PRESCRIBED	30.06.2013	31.03.2013	2012
1.	CAPITAL ADEQUACY RATIO (NET CAPITAL / FREDIT RISK + OPERATING RISKS + OPEN FX POSITION)	MIN. 12%	19.17%	21.69%	21.88%
2.	RATIO OF INVESTMENT INTO ENTITIES OUTSIDE THE FINANCIAL SECTOR AND IN FIXED ASSETS	MAX. 60%	21.60%	18.84%	18.38%
3.	BANK'S LARGE EXPOSURE RATIO	MAX. 400%	124.27%	82.14%	107.37%
4.	FX RISK RATIO	MAX. 20%	6.69%	7.52%	0.82%
5.	LIQUIDITY RATIO	MIN. 0.8%	2.93%	2.65%	2.18%

## 6. DESCRIPTION OF THE KEY RISKS AND THREATS THE COMPANY IS EXPOSED TO

A detailed overview of main risks and threats the Bank will be exposed to in the upcoming period is described in chapter 5. Risk Management, Notes to Financial Statements.

## 7. ALL MAJOR TRANSACTIONS WITH RELATED ENTITIES

As of 30.06.2013 the following entities are related to the Bank:

1. Komercijalna banka a.d. Budva, Montenegro,
2. Komercijalna banka a.d. Banja Luka, Bosnia and Herzegovina,
3. KomBank Invest a.d. Beograd
4. three legal entities and a large number of natural persons, according to the provisions of Article 2 of the Law on Banks in the part which defines "an entity related to the bank".

Total exposure to entities related to the Bank was RSD 673,401 thousand as at 30.06.2013 which accounted for 1.94% of the Bank's capital of RSD 34,695,769 thousand (according to the Law on Banks, the maximum value of total loans to all entities related to the Bank is 20% of capital).

As at 30.06.2013 the greatest share of exposure to entities related to the Bank, in the amount of RSD 657,687 thousand or 1.90 % of the Bank's capital, was made up of loans to those retail customers who are related to the Bank.

In accordance with Article 37 of the Law on Banks, the Bank did not grant its related entities any loans under conditions more favorable than those available to other entities that are unrelated to the Bank.

Additional description of the Bank's relation with related entities is given in Item 4. Relations with Related Entities, in the Notes to Financial Statements.

## 8. KEY DATA ON BUSINESS PLAN IMPLEMENTATION FOR 2013

Implementation of the Strategy and Business Plan in the first six months of 2013 was carried out in considerably altered macroeconomic environment which was characterized in particular by the following:

- there was a year-on-year decrease in GDP of 1.7% in 2012. After positive trends in the first four months and a year-on-year growth of GDP in Q1 this year (+2.1%), official statistics showed a decrease in economic activity in May – year-on-year decrease in industrial production of 0.5%;
- EUR/RSD exchange rate also recorded a departure from projected figures (exchange rate planned for the end of the current year: 1 EUR = 125.00 dinars, realized figure as of 30.06.2013: 1 EUR = 114.17 dinars),
- inflation rate (year-on-year rate, June 2013 / June 2012: 9.8%) remained almost unchanged and considerably departed from the targeted ceiling for June this year (5.5%).

Apart from everything listed above, operation of banks in the first six months of 2013 was also greatly affected by the public debt crisis in the Eurozone, suspension of an arrangement with IMF, foreign investors' reluctance to invest in Serbia, decreased demand for loans, increased credit risk due to recession and unemployment in the real sector and full implementation of Basel II standard.

## 8.1. Planned and Realized Values of the Balance Sheet in the First Six Months of 2013

The Bank's total balance-sheet assets at the end of the second quarter 2013 amounted to RSD 344,790.9 million and were higher than the value planned for this period by RSD 8,182.3 million or 2.4%. Considerable positive differences between realized and planned values were recorded at callable deposits and loans (realized value is higher by RSD 21,558.3 million, as a result of investment in NBS repo transactions and an increase in the amount of FX required reserve). Among other balance-sheet items, securities (other than own) recorded a positive departure from the planned value in the amount of RSD 2,642.2 million. As opposed to an increase in callable deposits and loans, there was a decrease in cash and cash equivalents in the amount of RSD 10,414.7 million, primarily due to a decreased amount of funds in the drawing account (RSD -6,132.7 million, compared to the initial balance). In the structure of balance-sheet liabilities, the greatest departure from planned values was recorded in deposits (RSD 14,872.6 million), while a considerable negative departure from the planned value was recorded in foreign credit lines – departure in the amount of RSD 9,609.9 million.

Trend in RSD exchange rate - depreciation (0.4% compared to EUR), mitigated to a certain extent the differences between realized and planned values.

The achieved growth of balance-sheet assets resulted in an increase of the Bank's market share from 11.3% at the end of 2012 to 11.8% as at 31.03.2013. In the first quarter the Bank's balance-sheet assets increased by 4.0% while the banking sector recorded a decrease in balance-sheet assets of 0.8% in the same period.

Realized and planned figures for assets and liabilities in the balance sheet as at 30.06.2013:

		(IN RSD MILLION)

## 8.2. Planned and Realized Values of Income Statement for the Period 01.01.-30.06.2013

(in RSD million)

	ITEM	Plan 01.01.- 30.06.2013	Achieved 01.01.- 30.06.2013	Achievement of plan in % (4/3)*100
1	2	3	4	5
1.1.	Interest income	10,858	10,664	98.22
1.2.	Interest expenses	4,772	4,537	95.08
<b>1.</b>	<b>Interest gains (1.1.-1.2.)</b>	<b>6,086</b>	<b>6,128</b>	<b>95.07</b>
2.1.	Fee and commission income	2,812	2,623	93.28
2.2.	Fee and commission expenses	382	454	118.85
<b>2.</b>	<b>Fee and commission gains (2.1. -2.2.)</b>	<b>2,430</b>	<b>2,169</b>	<b>89.26</b>
3.	Net exchange rate differentials and valuation adjustment (FX clause)	225	-24	-10.67
4.	Net other operating income and expenses	140	91	65.00
5.	Net expenses/income from indirect loan write-off and provisions	-684	-798	116.67
6.	Operating expenses	5,453	4,982	91.36
<b>7.</b>	<b>OPERATING PROFIT</b>	<b>2,744</b>	<b>2,583</b>	<b>94.13</b>

Items in the income statement recorded a negligible departure in interest gains (realized value was RSD 41.6 million above plan) and fee and commission gains (realized value was lower than planned by RSD 260.8 million). In the same period, operating expenses were lower than planned by RSD 470.9 million, as a result of reduced operating expenses. Combined result of business activities is a profit of RSD 2,582.5 which is 94.1% of the value planned for the period between 01 January and 30 June 2013.

# **NOTES**

## **TO FINANCIAL STATEMENTS FOR THE SECOND QUARTER OF 2013**

**Belgrade, July 2013**

## 1. INCORPORATION AND OPERATION OF THE BANK

Komercijalna Banka AD Beograd (hereinafter: "the Bank") was incorporated on 01 December 1970, and transformed into a joint-stock company on 06 May 1992.

As at 30.06.2013, the largest voting shareholdings in the Bank's are:

1. Republic of Serbia
2. EBRD, London, and

The Bank has three subsidiaries with the following percentage holdings in their respective ownership:

- 100% - Komercijalna Banka AD Budva, Montenegro
- 100% - KomBank INVEST AD, Serbia
- 99.99 % - Komercijalna Banka AD Banja Luka, Bosnia and Herzegovina.

The Financial Statements and the Notes thereto represent the data of the Bank as an individual parent legal entity.

The Bank activities involve lending, deposit and guarantee related operations, and payment transactions in the country and abroad in compliance with the Law on Banks. The Bank is bound to operate upon the principles of liquidity, safety and profitability.

As of June 30, 2013, the Bank consisted of the Head Office in Belgrade located in Svetog Save Street, No. 14, 24 branches and 231 sub-branches.

As at June 30, 2013, the Bank employed 3.020 persons, and on 31 December 2012, the number of employees was 2.989. Tax ID number of the Bank is 100001931.

## 2. BASES FOR FINANCIAL STATEMENTS PREPARATION AND PRESENTATION

### 2.1. Statement of Compliance

The Bank keeps records and prepares the financial statements in accordance with applicable Law on Accounting and Audit of the Republic of Serbia (RS Official Gazette, numbers 46/2006, 111/2009), The Law on Banks (RS Official Gazette, numbers 107/2005, 91/2010) and other relevant by-laws of the National Bank of Serbia, as well as other applicable legal regulations in the Republic of Serbia.

Pursuant to the Law on Accounting and Audit, legal entities and entrepreneurs in the Republic of Serbia prepare and present the financial statements in accordance with legal, professional and internal regulations. Professional regulations involve the applicable Framework for preparation and presentation of financial statements („Framework“), International Accounting Standards („IAS“), International Financial Reporting Standards („IFRS“) and interpretations that are an integral part of the standards, or the text of applicable IAS and IFRS which does not include the bases for conclusions, illustrative examples, guidelines, comments, contrary opinions, worked-out examples and other supplementary material.

At preparing and presenting periodical financial statements for the January-June 2013 period, the Bank was using the same accounting policies and calculation methods as used when preparing the Annual Financial Statements for 2012.

The enclosed financial statements are prepared in the format prescribed by the Instruction on the manner in which public companies and certain companies related with them present information to the Securities Commission in conformity with the Law on Capital Market (RS Official Gazette, number 31/2011). The prescribed set of quarterly financial statements includes Balance Sheet, Income Statement, Cash Flow Statement, Statement of Changes in Capital, and Notes to Financial Statements.

## 2.2. Assessment Rules

Financial statements are prepared based upon the historical value principle, save for the following items:

- financial instruments at fair value through income statement, which are valued at fair value;
- financial instruments available for sale, which are valued at fair value
- derivatives, which are valued at fair value, and
- building structures, which are valued at revalorized value.

## 2.3. Functional and Reporting Currency

Financial statements of the Bank are shown in thousands of dinars (RSD). The dinar is the official reporting currency in the Republic of Serbia and functional currency of the Bank.

## 3. BALANCE SHEET AND INCOME STATEMENT STRUCTURE, OVERVIEW OF SIGNIFICANT ACCOUNTING POLICIES AND KEY ACCOUNTING ESTIMATES AND ASSUMPTIONS

## INCOME STATEMENT

### 3.1. Interest Income and Expenses

Interest income and expenses, including default interest and other income and other expenses relating to interest-bearing assets, and/or interest-bearing liabilities, were calculated according to accrual concept and the conditions from the obligation relationship that are defined by the agreement between the Bank and the client.

Interest income also includes income based on financial risk protection instruments, mainly by pegging the annuities to the exchange rate of the Dinar against the EUR, another foreign currency or to the retail price rise index, and are calculated at the close of each month during the repayment and on the date on which the annuity is due for payment.

Net interest income in the period between January – June 2013 totaled RSD 6,127,649 thousand and was RSD 1,066,938 thousand or 21.08% higher compared with the same quarter of the preceding year.

### 3.2. Fees and Commissions Income and Expenses

Income and expenses based on fees and commissions are recognized according to accrual concept.

Income from fees for banking services and expenses based on fees and commissions are established at the time when they are due for collection or when paid. They are recognized in the Income Statement at the time when they are incurred and/or when due for collection. Income from fees for guarantee approval and other contingent liabilities is accrued in accordance with the period of duration and recognized in the Income Statement proportionally to the duration period.

Net income from fees in the period between January – June 2013 amounts to RSD 2,168,714 thousand, which is 1.97% or RSD 41,799 thousand higher compared to the same period last year.

### 3.3. Income and Expenses Based on Securities

Realized and unrealized gains and losses based on the change in the market value of trading securities are recognized through the income statement.

Gains and losses based on the change in amortized value of the securities held to maturity are recognized as income or expense.

Unrealized gains and losses based on securities available for sale are recognized within the revaluation reserves included in the Bank's capital. At the time of sale or permanent decrease in the value of such securities, corresponding amounts of the previously formed revaluation reserves are shown in the Income Statement as gains or losses based on investment in securities.

In the observed period of 2013 the net gains from sale of securities at fair value to the amount of RSD 15,929 thousand fully relates to maturity of old savings bonds ARS 2013 and the sale of Soja Protein shares. Net profit from the sale of securities available for sale is RSD 1,737 thousand and fully derives from RS treasury bills in RSD.

Gains/losses based on contracted currency clause and changes in the exchange rate of the securities available for sale, and interest income under the securities available for sale are shown within the Income Statement.

Dividends received based on investment in the shares of other legal entities in the amount of RSD 2,199 thousand are shown as income from dividend at the time of their collection.

Impairments for assessed risk values per all types of securities are recognized in the Bank's Income Statement.

#### **3.4. Re-statement of FX Amounts – Income and Expenses from Exchange Rate Differentials**

Business transactions in foreign currency were re-stated in the Dinars at mid-exchange rate on the inter-bank FX market, applicable on the transaction date.

Assets and liabilities shown in foreign currency as at the balance sheet date were restated in dinars at mid-exchange rate fixed on the inter-bank FX market, applicable on that date.

Net FX gains and losses arising from business transactions in foreign currency and when restating the balance sheet items shown in foreign currency, were booked as credited or charged to the income statement as gains or losses from exchange rate differentials.

Net FX gains in the reporting period, January through June 2013, totaled RSD 424,330 thousand. This is a direct result of the trends in RSD exchange rate against the currency basket between the two observed reporting periods and a result of managing the Bank's FX position which, apart from the FX positions, also includes the RSD positions with currency clause, as a form of protection against FX risk (link to note 3.6).

Assumed and contingent liabilities in foreign currency were re-stated in dinars at middle exchange rate on the inter-bank FX market applicable as at the balance sheet date.

#### **3.5. Other Operating Income**

In the overall other income of RSD 93,565 thousand, other operating revenues account for the largest share of 83.67% (65.35% in the previous year) which mainly refer to the income from renting the real estate amounting to RSD 47,512 thousand. Other operating revenues came as a result of the compensation for mobile telephone expenses, court expenses and cost of utility services.

#### **3.6. Net Expenses Based on Indirect Write-Off of Loans and Provisions**

The Bank classifies its financial assets into the following categories: financial assets at fair value whose effects of the changes in the fair value are shown in the Income Statement, loans and receivables, financial assets available for sale, and assets held to maturity. The classification depends on the purpose for which the financial assets have been acquired. Management classifies its financial investments at the time of initial recognition.

The Bank's financial assets are appraised as at the balance sheet date to establish whether objective proofs of impairment exist. If proofs of impairment exist, a recoverable amount of investment is determined. In order to manage the credit risk adequately and efficiently, the Bank has prescribed by its internal acts special policies and procedures for identifying the bad assets and for managing such assets.

The Bank's management makes estimates of the recoverability of receivables and/or allowance for investments based on individual assessment of risky receivables. Risky receivables are all receivables with delays in repayment. The Bank assesses the recoverable amount of receivables and loans by taking at the same time into account the regularity of payments, debtor's financial standing and the quality of the collateral, as well as the contracted cash flow and historical loss related data.

For assessed impairment amount, the Bank makes allowance against the expenses of the period in which the impairment occurred. If in later periods the Bank management finds that conditions have changed and that impairment is no longer in place, the allowance made earlier is abolished in favor of income. Abolishment of the allowance cannot result in a carrying value of the asset that is larger than the value such asset would have had if it had not been impaired earlier.

Net expenses from indirect write-off of loans and provisions amounted to RSD 798,414 thousand, and were RSD 511,152 thousand or 2.8 times higher compared to the same period of 2012, primarily due to the Bank's priority to maintain credit risk at a level acceptable for the Bank. Excluding the effect of provisioning for litigations, these expenses were higher and amount to RSD 1,179,184 thousand. Provisions for litigations were cancelled on the basis of collection made in litigation with Takovo to the amount of RSD 380,770 thousand.

### **3.7. Costs of Wages, Wage Compensations and other Personal Expenses**

Costs of wages, wage compensations and other personal expenses of RSD 2,095,444 thousand were RSD 80,839 thousand or 4.01% higher compared to the same period last year, mainly due to the rise of the cost of labor by 7.0% in September 2012, the rise of average exchange rate of the Dinar against EUR by 1% in terms of the wages contracted with the currency clause and increase of the average salary in RS by 6.3%, as it represents the basis for calculation of the meal allowance, holiday reimbursement and contributions.

### **3.8. Depreciation Costs**

Depreciation costs amounting to RSD 386,833 thousand increased compared with the period January – June 2012 by RSD 17,372 thousand or 4.70 %, mainly due to the newly purchased fixed assets and intangible investments during the previous and this year.

### **3.9. Operating Costs and other Operating Costs**

Operating costs and other operating costs reached RSD 2,522,151 thousand and increased compared to the same period last year by RSD 36,056 thousand or 1.45%.

The largest items of operating and other operating costs refer to:

- costs of production services to the amount of RSD 1,001,667 thousand, followed by the highest sums for: rental costs of office space and space for advertising to the amount of RSD 316,006 thousand, as well as the advertising and marketing costs to the amount of RSD 223,081 thousand.
- intangible costs totaling RSD 794,401 thousand, the highest individual item being the cost of deposit insurance coming to RSD 366,669 thousand and,
- cost of materials amounting to RSD 240,873 thousand.

### **3.10. Income and Expenses Based on Changed Value of Property and Obligations**

Loans and deposits in Dinars for which the protection against risk has been contracted by pegging the exchange rate of the Dinar against the EUR, another foreign currency or the retail price rise index, were revalued in accordance with the concrete agreement for each loan. The difference between the nominal value of outstanding loan principal or unpaid deposits and the revalorized amount is shown within the receivables based on loans or deposit liabilities. The effects of this revaluation are recorded within income and expenses based on changed value of property and obligations.

In the period between January – June 2013, income from changed value of assets and liabilities totaled RSD 5,017,957 thousand, and expenses on this basis were at the level of RSD 4,618,071 thousand, which makes a net expense of RSD 399,886 thousand. The declared net income is under direct influence of trends in RSD exchange rate for loans and liabilities contracted with the currency clause (EUR, USD and CHF) as a form of protection against the risk and management of the Bank's FX position.

## **BALANCE SHEET**

Total balance sheet sum on 30.06.2013 amounts to RSD 344,790,937 thousand, which is an increase from the start of the year of RSD 20,603,164 thousand or 6.4 %. The increase came mostly as a result of a growth of deposits and drawn-down credit lines.

## **ASSETS**

In total Bank's assets, loans and deposits to customers had a dominant share of 53.56% (2012: 54.63%) followed by callable deposits and loans with a share of 17.93% (2012: 13.28%), cash and cash equivalents with a share of 8.71% (2012: 12.50%) and securities (own securities excluded) with a share of 12.37% (2012: 12.75%).

### **3.11. Cash and Cash Equivalents**

In the cash flow balance sheet, cash and cash equivalents involve the cash, assets in accounts with other banks and checks sent for collection.

As at 30.06.2013, cash and cash equivalents totaled RSD 30,027,999 thousand and accounted for 8.71% of total Bank's assets (12.50 % on 31.12.2012). Against December the 31<sup>st</sup> 2012, this item decreased by RSD 10,486,181 thousand, which mostly resulted from net decrease in cash due to an increase in investment into REPO transactions with NBS in comparison with the increase in cash caused by the growth of transaction deposits for the same observed period.

### **3.12. Callable Deposits and Loans**

As at 30.06.2013, callable deposits and loans with the balance at RSD 61,834,332 thousand and the percentage share of 17.93% in total assets, increased year on year by RSD 18,780,830 thousand or 13.28%. The net increase is the result of an increase in REPO lending transactions in dinars by RSD 18,000,000 thousand and an increase in foreign exchange obligatory reserves with the NBS by RSD 780,830 thousand.

### **3.13. Loans and Deposits**

Loans are shown in the balance sheet at the level of approved loans, less repaid principal and less the allowance based on the assessment of the concretely identified risks for certain loans and risks that are empirically included in the loan portfolio. In assessing the mentioned risks, the management applies the methodology, which is based on full application of IAS 39.

Loans in Dinars, for which the protection against risk has been contracted by pegging the exchange rate of the Dinar against the EUR, another foreign currency or the retail price rise index, were revalued in accordance with the concrete agreement for each loan. The difference between the nominal value of outstanding principal and the revalued amount is shown within the loan receivables. The effects of this revaluation are recorded within income and expense based on changed value of property and obligations.

Net positive or negative exchange rate differentials resulting from business transactions in foreign currency and from restating the balance sheet items in foreign currency, were accounted for in the income statement as exchange rate gains or losses.

Loans and deposits to customers to the amount of RSD 184,680,333 thousand and with a share of 53.56% in total assets in 2013, were higher, compared to 2012 by RSD 7,573,468 thousand or 4.28%, which is to the largest extent the result of increase in lending to banks 3.6 times and lending to retail customers by 7.7%. Corporate loans decreased by 2.1%, mostly as a result of collection of matured loans.

#### **3.14. Securities (Own Shares Excluded)**

Investments in securities other than own shares amounting to RSD 42,633,726 thousand or 12.37% share in the total assets increased compared to the 2012 by RSD 1,286,007 thousand, or 3.11% as a result of increased investments in bonds and treasury bills of the Republic of Serbia in foreign currency amounting to RSD 5,330,298 thousand while reducing investments in securities of the Republic of Serbia in dinars RSD 4,044,291 thousand based on maturity date.

#### **3.15. Equity shares**

Equity shares as of 30.06.2013 amounted to RSD 5,976,095 thousand and comprise 1.73% of the total assets. The achieved growth compared to 31.12.2012 to the amount of RSD 59,062 thousand primarily resulted from the increase in the share in equity of non-resident persons (Master and Visa International companies).

#### **3.16. Other Investments, Intangible Investments, Fixed Assets and Investment Properties, Non-Current Assets Intended for Sale, Deferred Tax Assets and Other Assets**

All listed positions make only 5.16% of the total assets, the highest percentage of which refers to fixed assets and investment properties that totaled 2.17%, followed by other assets 1.48% and other loans 1.27%. Other assets, amounting to RSD 5,113,902 thousand, increased by RSD 1,741,609 year on year, mostly due to the influence of growth in demand arising from buying and selling the currencies on the FOREX market and receivables in foreign currency based on spot transactions, increase in material value acquired through collection of receivables and receivables for calculated accrued interest from the Development Fund of the Republic of Serbia compared to the increase in other categories of other investments.

### **LIABILITIES**

In the period January - June 2013 no major changes took place in the structure of liabilities compared to 31 December 31, 2012. In the structure of liabilities, the highest share of deposits and capital remained, with the total percentage of 88.96% (2012: 91.12%) of total liabilities. Other items account for 11.04% of total liabilities, wherewith the highest portion of this position refers to other liabilities (based on lines of credit and subordinated debt) that come to 10.14%.

### 3.17. Deposits

Deposits are shown at the level of deposited amounts, which can be increased by calculated interest, which depends on the contractual relationship between the depositor and the Bank. The Bank agreed with the depositors an interest rate that depended on the amount of deposit.

FX deposits are shown in the Dinar according to mid-exchange rate of currencies applicable as at the balance sheet date.

In the balance sheet, deposits are shown as transaction and other deposits.

The most significant share in the structure of liabilities was that of other deposits in the amount of RSD 196.631,813 thousand, which represented 57.03% of total liabilities (2012: 60.21%) followed by transaction deposits in the amount of RSD 47,975,821 thousand with a share of 13.91% (2012: 12.44%) and capital in the amount of RSD 62,142,178 thousand and a share of 18.02% (2012: 18.47%).

If compared with 2012, the Bank increased the level of transaction deposits by RSD 7,639,045 thousand or 18.94%, while other deposits recorded an increase of RSD 1,447,845 thousand or 0.74%. In the structure of transaction deposits, deposits in local currency continued to be dominant with the share of 73.82%, while the remaining 26.18% relates to deposits in foreign currency. In other deposits, the FX deposits are predominant – 86.57% share, while the share of Dinar deposits is at 13.43%. FX savings increased by EUR 29.9 million.

### 3.18. Provisions

The Bank's provisions of RSD 1,150,238 thousand include the provisions for: coverage of obligations (lawsuits), long-term employees' wages, and provisions for losses under off-balance sheet assets. In the observed period, compared to the 2012, the provisions decreased by RSD 1.181.522 thousand. The decrease mainly refers to cancellation of provisions based on the favorable court judgment in a dispute with Takovo and as a result of a decrease in provision for the amount of forced collection arising from the court dispute involving a guarantee to the client IEG.

### 3.19. Capital

The Bank's capital comprises the original founding capital, shares of later issues, reserves from the profit, revaluation reserves, unrealized losses based on securities available for sale, accumulated result, and the current period result.

The Bank's capital was formed from cash invested by the Bank founders. The founder cannot withdraw the assets invested in the Bank's capital.

As at June 30, 2013, the Bank's capital consists of:

In thousand RSD	2013	2012
Share capital	17,191,466	17,191,466
Issue premium	22,843,084	22,843,084
Capital	40,034,550	40,034,550
Reserves from the profit	14,785,440	14,785,440
Revaluation reserves	1,209,314	867,774
Unrealized losses based on securities available for sale	(321,203)	(7,016)
Reserves	15,673,551	15,646,198
Accumulated profit	6,434,077	4,185,812
<b>Balance</b>	<b>62,142,178</b>	<b>59,866,560</b>

In conformance with the Bank's founding acts, the Bank's capital consists of the share capital and Bank reserves.

The share capital was formed by initial investments made by the shareholders and later issues of new shares. The shareholders have the right to manage the Bank, as well as the right to participate in the profit distribution.

Based on the Decision of the Securities Commission of 17 March 2011, the Bank replaced the shares of the nominal value of 10,000.00 Dinars with the shares of a nominal value of 1,000.00 Dinars.

The shares were replaced in order to increase the liquidity of the securities and make them more easily accessible to a broader circle of small investors.

The Bank is bound to maintain the minimum capital adequacy ratio of 12% prescribed by the National Bank of Serbia, according to the Basel Convention applicable to all banks. The capital adequacy ratio of the Bank as at June 30, 2013 calculated based on the financial statements, is 19.17% calculated by applying the decisions of the National Bank of Serbia made public for 2013.

Moreover, the Bank is bound to maintain the money-capital portion at the level of EUR 10.000 thousand. As at 30.06.2013, the money-capital portion was above the prescribed level.

The structure of the share capital – ordinary shares as at June 30, 2013 was as follows:

Shareholder Name	share %
Republic of Serbia	42.60
EBRD, LONDON	25.00
Jugobanka AD Beograd in bankruptcy	3.69
Evropa osiguranje AD Beograd in bankruptcy	2.75
INVEJ DOO, Beograd	2.64
ARTIO INT. EQUITY FUND, New York	2.35
Company Dunav, Beograd	1.97
Others	19.00
	<u>100.00</u>

According to the Decision of the Bank No. 7710/1-3 dated 24.04.2013, the profit from 2012 was distributed. Distribution anticipated the amount of RSD 37,351 thousand to be allocated for payment of dividends on preference shares.

## 5. RISK MANAGEMENT

The Bank has recognized risk management process as the key element of business management given that risk exposure is an inseparable part of banking and is managed through a process of continued identification, measurement, monitoring, minimizing and setting of risk limits and through other types of control, including reporting in accordance with adopted strategies and policies.

The Bank has established a comprehensive and reliable risk management system that includes: risk management strategies, policies and procedures, appropriate organizational structure, effective and efficient process of managing all risk it is exposed to, adequate system of internal controls adequate information system and process of internal capital adequacy assessment.

Risk management process involves clear determining and documenting risk profile and adjusting risk profile to the Bank's aptitude to assume risk in accordance with the adopted strategies and policies.

The basic objectives that the Bank set for the risk manages system are the following: minimizing the negative effects on financial result and equity within acceptable risk levels, maintaining the required level of capital adequacy, developing the Bank's activities in accordance with business opportunities and market development with a view to gain competitive advantage.

The Bank implements Basel II standards and permanently monitors all the announcement and amendments to the effective regulations, analyses the risk levels and undertakes measures for timely reconciliation of its operations with newly enacted regulations in accordance with the risk level acceptable to the Bank. Through the clearly defined process of introducing new products, the Bank analyses the influence of all new services and products on the future risk exposures in order to optimize its revenues and losses based on the estimated risk as well as to minimize all potential adverse effects on the Bank's financial result.

### **Risk Management System**

The risk management system is governed by the following internal enactments:

- Risk Management Strategy and Capital Management Strategy;
- Risk Management Policies;
- Risk Management Procedures;
- Methodologies for Managing Individual Risks; and
- Other enactments.

Risk Management Strategy sets out:

- Long-term objectives, defined by the Bank's business policy and strategy and its aptitude to assume risk determined in accordance with those objectives;
- Basic principles of risk assumption and management;
- Basic principles of the process of internal assessment of the Bank's capital adequacy; and
- Overview and definitions of all types of risk the Bank is exposed to or may be exposed to.

The Bank specified the basic principles of risk management for meeting its long-term objectives:

- Organizing operation of a separate organizational unit for risk management;
- Functional and organizational separation of risk management activities from the regular operating activities of the Bank;
- Comprehensive risk management;
- Effective risk management;
- Cyclic risk management;

- Developing risk management as a strategic orientation; and
- Risk management as a part of corporate culture.

Policies for managing certain risk types define the following:

- Manner of organizing risk management processes within the Bank and clear division of personnel responsibilities in all stages of the process;
- Manner of assessing the Bank's risk profile and methodology for identifying, measuring and assessing risks;
- Manners of risk monitoring and control and establishing the system of limits, i.e. types of limits the Bank uses as well as their structure;
- Measures for risk mitigation and rules for implementation thereof;
- Manner and methodology for implementing the process of internal assessment of the Bank's capital adequacy;
- Principles of the system of internal controls functioning; and
- Framework and frequency for stress testing and procedure in instances of unfavorable test results.

Procedures for managing certain risk types define, in greater detail, the process of managing risks and competencies and responsibilities of all organizational units of the Bank in the risk management system.

Individual methodologies further and in more detail prescribe methods and approaches used in the risk management system.

### **Competencies**

*The Board of Directors* is authorized and responsible for establishing a uniform risk management system and for monitoring such system, adopting policies and procedures for risk management and capital management strategy, establishment of internal control system, supervision of the work of the Executive Board and execution of the process of internal capital adequacy assessment.

*The Executive Board* is authorized and responsible for implementation of risk management strategy and policies, capital management strategy adoption and efficiency analysis of risk management procedure implementation, which define processes of identifying, measuring, minimizing, monitoring, controlling reporting risk the Bank is exposed to. Reports to the Board of Directors of the efficiency of application defined risk management procedures.

*The Audit Committee* is authorized and responsible for continued analysis and monitoring of the adequate implementation of the adopted risk management strategies and policies and internal control system. At least monthly, the Audit Committee reports to the Board of Directors on its activities and identified irregularities and proposes how to eliminate them.

*The Asset and Liability Management Committee* is authorized and responsible for monitoring the Bank's risk exposure resulting from the structure of its receivables, payables and off-balance sheet items, and proposes measures for managing interest and liquidity risks.

*The Credit Committee* decides on loan approval requests within framework determined by the Bank's enactments, analyses the Bank's exposure credit, interest rate and currency risk, analyzes loan portfolio and proposes measures to be taken to the Executive Board.

*The Receivables Collections Committee* is authorized and responsible for managing risk-weighted placements; it makes decisions on the write-off of risk-weighted loans up to set limits of authorization and recommends write-off of loans to the Executive Board and Board of Directors exceeding its limits of authorization.

*The risk management function* defines and proposes the risk management strategy and policies to the Board of Directors for adoption, defines and proposes risk management procedures and methodologies to the Executive Board for adoption, identifies, measures, mitigates, monitors, controls and reports on the risks the Bank is exposed to. It is also in charge of developing models and methodologies for all stages of risk management and reporting to the competent Bank's bodies.

*The Asset Management Division* is responsible for managing assets and liquidity, the Bank's assets and liabilities. It is also responsible for the Bank's liquidity risk, interest rate risk and foreign currency risk.

*The Internal Audit Division* is responsible for continued monitoring of implementation of risk management policies and procedures at Bank level, and tests the adequacy of procedures and the Bank's compliance thereto. Internal Audit reports its findings and recommendations to the Audit Committee and the Board of Directors.

*The Compliance Control Division* is obligated to identify and assess compliance risks at least annually and propose risk management plans, whereof it prepares a report and submits it to the Executive Board.

### **Risk Management Process**

The Bank regularly measures and evaluates risks identified in its operations. Measurement entails applying qualitative and quantitative measurement methods and models that enable detection of changes in risk profile and assessment of new risks.

For all risks identified the Bank determines their significance based on as comprehensive assessment of risks inherent in the Bank's particular operations, products, activities and processes.

Risk alleviation or mitigation involves risk diversification, transfer, minimization and or avoidance; the Bank performs risk mitigation in accordance with risk profile and risk appetite.

Risk monitoring and control is based on limits that are set by the Bank. They in turn depend on business strategy and the business environment, as well as on the level of risk that the Bank is ready to accept.

Risk management reports are regularly submitted to: the Bank's Board of Directors, Executive Board, Audit Committee, Asset Liability Management Committee and Credit Committee, and they contain all the information required for risk assessment and reaching of conclusions about the Bank's risks.

### **Types of Risk**

In its business operations the Bank is exposed to the following risks in particular: credit risk and related risks, liquidity risk, market risk and operational risk, investment risk, country risk and all other risks that may occur in the course of the Bank's regular operations.

#### **5.1. CREDIT RISK**

Credit risk represents the risk of negative effects on the Bank's financial result and capital arising from debtors' inability to settle the matured liabilities to the Bank.

The Bank monitors the following risks within the credit risk:

- **Default risk** - the risk of loss that may arise if a debtor fails to settle liabilities toward the Bank;
- **Downgrade risk** - the risk of loss that may arise if a risk level of a debtor is downgraded (deterioration of the customer credit rating);
- **Risk of change in the value of assets** - the risk of loss that may arise on assets in the event of a decline in their market value as compared to the price at which assets were acquired;

- **Credit foreign exchange risk** – represents probability that the Bank will incur a loss due to default of the debtor in liability settlement within contractually defined terms, which is caused by adverse impact of the RSD exchange rate changes on the debtor's financial situation;
- **Concentration risk** – represents a risk that is a direct or indirect outcome of the Bank's exposures the same or similar risk factor or type, such as: exposure to a single entity or a group of related parties, industries, geographical regions, types of products and activities, collaterals, financial instruments;
- **Exposure risk** - is a risk that can arise from the Bank's exposure to a single entity, group of related entities or the Bank's related parties;
- **Country risk** – relates to the borrower's country of origin and represents the probability of negative effects on the Bank's financial result and equity due to the inability to collect receivables from abroad and is caused by political, economic and social conditions in the borrower's country of origin.

In addition to the aforesaid risks, the Bank also monitors the following related risks:

- **Residual risk** – is a risk that credit risk mitigation techniques may be less efficient than expected, i.e. that their application is not sufficient to alleviate the risks the bank is exposed to;
- **Risk of reduced value of receivables** – is a risk of possible emergence of negative effects on the Bank's financial results and capital due to reduced value of repurchased receivables for cash on non-cash liabilities of the previous creditor to the debtor;
- **Settlement/delivery risk** – is a risk of possible emergence of negative effects on the Bank's financial results and capital due to counterparty default on free delivery transactions as of contractually defined settlement/delivery date;
- **Counterparty risk** – is a risk of possible emergence of negative effects on the Bank's financial results and capital due to counterparty failure to settle its liabilities prior to the ultimate settlement of the transaction cash flows, i.e. settlement of cash payment.

According to the volume, type and complexity of its operations, the Bank has organized the credit risk management process and clearly delineated employee responsibilities in all stages of the process. The organizational model of credit risk management system enables adequate communication, information exchange and collaboration at all organizational levels within the Bank as well as clear operational and organizational separation of functions for independent risk management and supporting activities on one hand and the activities of risk assumption on the other, i.e. segregation of duties, competencies and responsibilities. The Bank has also established an adequate information system for full coverage of persons involved in credit risk management system and appropriate management reporting.

The objective of credit risk management is to minimize adverse effects of the credit risk on the Bank's financial result and equity based on balance sheet and off-balance sheet investments and operations with counterparties for items carried in the banking book.

The level of credit risk exposure acceptable to the Bank is in line with the defined risk management strategy and depends on the Bank's portfolio structure based on which negative effects on the Bank's financial result is limited and capital requirements for credit risk. On the other hand, the Bank does not make high-risk investments such as investments in highly profitable projects with significant risk levels.

The basic principles of credit risk management are as follows:

- Managing credit risk at the individual loan level as well as the Bank's entire portfolio level;
- Maintaining credit risk level that minimizes the negative effects on the Bank's financial result and capital;
- Investment rating according to risk;
- Operating in accordance with best banking practices of loan approval;
- Ensuring adequate credit risk management controls.

In its effort to manage credit risk the Bank seeks to do business with customers that have good credit rating and to acquire appropriate collaterals to secure repayments. The Bank assesses creditworthiness of each customer upon the submission of a loan application and regularly monitors its debtors, loans and collaterals, in order to be able to undertake appropriate activities for the purpose of collecting its receivables.

Credit risk identification involves analysis of all indicators leading to the emergence and increase in credit risk exposure. The Bank determines the causes of the current credit risk exposure in a comprehensive and timely manner and assesses such causes based on the incurred and projected changes in the market, as well as based on the introduction of new products and activities. The Bank's credit risk depends on the debtor creditworthiness, its regularity in settling liabilities due to the Bank and collateral quality.

The Bank performs quantitative and/or qualitative measurement, i.e. assessment of the identified credit risk. The credit risk measurement process is based on two parallel approaches:

- Regulatory approach – process of impairing investments and estimating provisions against losses per off-balance sheet as required by IAS 39 and IAS 37 and calculating provisions pursuant to the regulations of the National Bank of Serbia;
- Internal approach – measuring risk level of individual loans and investments based on the internally adopted rating system.

The rating system is not merely an instrument for forming individual decisions and assessing risk levels of individual investments; it is also a basis for portfolio analysis, support in loan approval and loan impairment procedure as well as in estimating provisions against losses per off-balance sheet items for the purpose of loan and investment ranking by risk level and stating realistic value of receivables.

In addition to the internal rating system, in credit risk analysis the Bank also uses principles prescribed by the National Bank of Serbia, which require classification of receivables and investments based on the prescribed criteria as well as calculation of the reserve for estimated credit risk losses. Application of these principles allows the Bank to cover unexpected losses due to the customer's inability to settle liabilities as they fall due, in accordance with contractually defined terms. For these purposes, the Bank classifies receivables and assesses the level of necessary reserve using the regular analysis of portfolio. The analysis includes the measurement of adequacy of reserves formed against individual borrowers, risk categories, portion of portfolio and at overall portfolio level. Reserves for estimated losses represent a certain form of hedge against potential adverse effects in case invested funds are not repaid when due and in full.

Prior to loan approval, the Bank assesses the creditworthiness of the borrower based on internally defined criteria as a primary and offered collateral as a secondary source of collection/loan repayment. Based on the identified and measured credit risk level (assessed financial situation and credit worthiness of the borrower, value and legal security of the credit hedge and other relevant factors), and independent risk assessment, the Bank's competent bodies enact a loan approval decision in accordance with the defined decision making system.

Decisions on credit risk exposure are defined through the decision making system that depends on the type of customer and exposure level: for loans within defined limits decisions are made by the branch credit committees, although in certain cases approval of the risk management organizational unit is required. Central Credit Committee decides on the loans in excess of the defined limits (depending on the type of client) with prior opinion of the risk management organizational unit. The Executive Board and Board of Directors make decisions depending on the exposure levels.

In decision making related to areas of crediting, irrespective of the decision making level, the principle of double control, the so-called "four eyes principle," is observed which ensures that there is always a party that proposes and a party that approves a particular loan/investment.

For investments contracted in foreign currencies or dinars indexed to a currency clause, the Bank estimates the effects of the changes in foreign exchange rates on the financial situation and creditworthiness of debtors and

particularly analyzes adequacy of the debtor's cash flows in relation to the changed level of liabilities per loans assuming that there will be certain fluctuation in RSD exchange rates on an annual basis.

Alleviating credit risk entails maintaining the risk at the level acceptable to the Bank's risk profile, i.e. maintaining acceptable level of the Bank's loan portfolio.

The basic techniques for credit risk mitigation are as follows:

- Exposure limits – concentration risk;
- Investment diversification;
- Collaterals; and
- Residual risk.

The Bank's exposure limits per individual debtor are based on the assessment of the debtor's creditworthiness, whereas the exposure limits at the portfolio level are focused on restricting exposure concentration within the portfolio. The Bank continuously controls credit risk movements within a defined risk profile.

Concentration risk includes: large exposure (exposure to a single entity or a group of related entities and the Bank's related parties), group exposures with the same or similar risk factors such as industry sectors, types of products, geographical areas and the like, county risk and credit risk hedges.

Investment diversification is aimed at alleviating credit risk through reduction portfolio concentrations in certain segments of assets.

Monitoring investment quality at the individual debtor level is primarily based on obtaining updated information on the financial situation and creditworthiness of the debtor as well as on the market value of collateral, whereas credit risk monitoring at the portfolio level is performed through identification of changes at the level of client groups with certain preset levels of risk, investment, collateral and required reserves for estimated and unexpected losses for the purpose of establishing management of the asset balances and quality. For protection against credit risk exposure, in addition to the regular monitoring of the customers' business operations, the Bank contractually defines security instruments (collaterals), which reduce credit risk.

In order to protect itself from changes in the market value of collaterals (mortgages, pledges, securities etc.), the Bank adjusts the appraised collateral value for a defined percentage depending on the collateral type and location, which percentage is reviewed at least annually or more frequently as appropriate. necessary. In this way, the Bank protects itself from potential losses arising from the impossibility of collection of receivables through security instrument activation.

Credit risk control entails a process of continuous reconciling business operations with the defined system of limits, both on a daily and monthly bases, as well as under conditions of large credit exposure approaching the upper risk profile limit, i.e. upon introduction of new products and business activities.

As a hedge against counterparty default risk, the Bank undertakes the following steps in respect to collection of due receivables: rescheduling or restructuring, out-of-court settlement, seizure of goods or properties in order to collect receivables, sale and/or assignment of receivables, executing agreements with interested third parties and instigating court proceedings and other measures.

The Bank reschedules and restructures receivables from customers experiencing certain difficulties in operations. If the undertaken measures for regulating collection, i.e. enforced collection and court proceedings fail to provide expected results, i.e. when receivables cannot be collected in full, the Bank initiates write-off of the remaining receivables.

Apart from credit risk exposure, the Bank also has off-balance sheet exposures (various types of payment and performance guarantees, acceptances and letters of credit) based on which the Bank has contingent liabilities to make payments on behalf of third parties. For off-balance sheet exposures the Bank uses the same control processes and procedures that are used for credit risk.

Credit risk reporting includes internal and external reporting systems executed on a monthly basis according to a preset schedule and in conformity with the defined reporting system.

### 5.1.1. Total Credit Risk Exposure

The largest credit risk for the Bank arises from actual loan arrangements; however, the Bank is exposed to the credit risk based on off-balance sheet items, which is caused by commitments and contingent liabilities. The total exposure to credit risk is presented here in the gross amount before the effects of risk alleviation and asset impairment.

### 5.1.2. Downgrade Risk

The quality of the Bank's assets is measured by the level of exposure to individual risk categories according to internal rating system criteria. The internal rating system focuses on quantitative and qualitative parameters for assigning customer ratings. The rating scale consists of 5 risk categories that are subdivided into 17 subcategories. The rating scale is used as a uniform method for assigning ratings which ensures that customers with the same rating have the same credit characteristics and the same probability of default, in part or in full, over the period of one year. The basic parameters of credit risk used in determining a risk subcategory are calculated and monitored on a monthly basis.

A low level of risk implies doing business with customers with a high credit rating (risk rating categories 1 and 2), increased level of risk implies doing business with customers with operating difficulties that could have a negative impact on the settlement of liabilities (risk rating category 3), and a high level of risk characterizes customers with negative operating results and poor credit rating (risk rating categories 4 and 5).

The Bank guards against downgrade risk through continuous monitoring of customers' business operations and by identifying changes that could arise through: deterioration of a borrower's financial standing, delays in repayment and changes in the business environment, as well as by securing appropriate collaterals.

### 5.1.3. Risk of Change in the Value of Assets

Allowance for impairment of investments is intended to ensure reasonable, cautious and timely registering of losses on loan impairment, as well as to intervene in respect of contingent liabilities with a view to protect the Bank in the period when the loss occurs and is definitely confirmed (realized), due to inability to collect contracted amounts or through outflow of assets to settle contingent liabilities.

Allowance for impairment of investments and provisions are made when there is justification and objective evidence of impairment arising as the result of events that occurred after initial recognition of a loan, that have a negative effect on future cash flows associated with a loan.

Key elements in assessing impairment of investments are as follows: overdue payments on principal or interest, cash flow difficulties on the part of the borrower, the borrower's credit rating deterioration or changes in the initial terms of contract etc.

Allowance for impairment is based on estimated future cash flows from the borrower's business or collateral foreclosure if it is assessed that a loan can be realistically settled from such assets.

#### **Assessment of Allowance for Impairment of Receivables**

The Bank assesses allowance for impairment of receivables on an individual and on a group basis.

##### ***Individual Assessment***

The Bank assesses impairment of each individually significant investment and considers the financial position of the loan beneficiary, sustainability of its business plan, its ability to improve performance in the event of financial difficulties, income projections, availability of other financial support and collateral value which can be realized, as well as scheduling of expected cash flows. In the event of new information coming to light that significantly alters the customer's creditworthiness, value of collateral and likelihood that liabilities toward the Bank will be settled, ad hoc assessment of loan impairment is performed.

##### ***Group Assessment***

Impairment is assessed on a group basis for investments that are not individually significant and for individually significant loans and advances, when there is no objective evidence of individual impairment. Group assessment is performed monthly within groups that are determined based on internal methodology and internal rating system. Group impairment percentages are calculated based on migration of risk rating categories in default status per type of borrower or product. The obtained migration percentages are adjusted for collected receivables.

Impairment of loans decreases the value of loans and is recognized as an expense in the income statement.

#### **Assessment of Provisions for Losses on Off-Balance Sheet Items**

Assessment of provisions for losses on off-balance sheet items (contingent liabilities) is performed when it is estimated that it is fairly certain that an outflow of assets will be required to settle contingent liabilities.

In assessing provisions for contingent losses on off-balance sheet items, funds obtained by activating collaterals are recognized if it is completely certain that cash outflows for contingent liabilities will be settled from collaterals.

#### 5.1.4. Concentration Risk

The Bank controls concentration risk by establishing a system of limits to the exposures with the same or similar risk factors (industry sectors/activities, product types, geographical regions, single entities or groups of related parties, collaterals...). Establishment of appropriate exposure limits is the basis for concentration risk control with the aim of loan portfolio diversification.

Depending on general economic trends in certain industry sectors, the Bank diversifies its investments in industrial sectors that are resistant to the impact of negative economic trends.

#### 5.1.5. Credit Risk Hedges (Collateral)

For the purpose of protection against credit risk, in addition to regular monitoring of the customer business operations, the Bank also acquires security instruments (collaterals) to secure the collection of receivables and minimize credit risk. Depending on the assessment of the ability to settle contractual liabilities, the level of loan coverage is defined so that in case of the debtor default, the bank could collect its receivables through collateral foreclosure. The quantity and type of collateral depends on the assessed credit risk.

As a standard type of loan security instrument, the Bank demands and receives from clients contractual authorizations for account withdrawals and bills of exchange, whereas, depending on the credit risk assessment and loan type, additional collaterals agreed upon include the following:

- for commercial loans – pledge over movable and immovable property (mortgages), deposits, banking, corporate and state-issued guarantees, sureties, pledge over securities;
- for retail loans – mortgages, deposits, co-sureties and insurance of the National Corporation for Housing Loans.

For valuation of property or pledges assigned over movable assets, the bank hires certified appraisers in order to minimize potential risk of unrealistic valuation. Property, goods, equipment and other movables pledged must be insured by an insurance company acceptable to the Bank and insurance policies must be duly endorsed in favor of the Bank.

The Bank monitors the market value of collaterals and if necessary, it can demand additional collateral pursuant to the loan/deposit agreement executed.

It is the Bank's policy to ensure collection from collateral foreclosure and use the proceeds therefrom to reduce or repay debt.

#### Fair Value of Collaterals

**5.2. LIQUIDITY RISK**

Liquidity risk represents the risk of negative effects on the Bank's financial result and equity resulting from the Bank's difficulty or inability to settle its matured liabilities in instances of insufficient liquidity reserves and inability to cover for unexpected outflows and other liabilities.

The Bank operates in accordance with the basic principles of liquidity, maintaining a sufficient level of funds to cover liabilities incurred in the short term, i.e. it observes the principle of solvency by establishing the optimal financial leverage and sufficient liquidity reserves which do not compromise realization of the projected return on equity.

Liquidity risk represents the Bank's inability to settle its matured liabilities. Liquidity risk may be manifest as the risk related to sources of funds and market liquidity risk. The problem of liquidity in respect of the sources of funds relates to the structure of liabilities and is expressed through potential significant share of unstable and short-term sources of funds or their concentration. On the other hand, liquidity risk is reflected in reserves deficiency and difficulty or inability to obtain liquid assets at reasonable market prices.

The Bank has established appropriate organizational structure, which allows for clear differentiation between the process of assuming and the process of managing liquidity risk. The Asset and Liability Management Committee

and Liquidity Committee have the most significant role therein as well as other competent boards/committees, whose decisions can impact the Bank's exposure to this risk.

In order to minimize liquidity risk, the Bank:

- Diversifies sources of assets in respect to their currencies and maturities;
- Forms sufficient liquidity reserves;
- Manages monetary funds;
- Monitors future cash flows and liquidity levels on a daily basis;
- Limits principal sources of credit risk with most significant impact on liquidity; and
- Defines and periodically tests Plans for Liquidity Management in Crisis Situations.

The liquidity management process comprises identification, measurement, minimizing, monitoring, control and liquidity risk reporting.

In identifying liquidity risk, the Bank identifies in a comprehensive and timely manner the causes that lead to the occurrence of liquidity risk determines current liquidity risk exposure as well as liquidity risk exposure arising from new business products and activities.

Measurement and assessment of liquidity risk in the Bank is performed through quantitative and/or qualitative assessment of identified liquidity risk by using the following techniques:

- GAP analysis;
- Ratio analysis; and
- Stress test.

Minimizing liquidity risk consists of maintaining this risk at a level that is acceptable to the Bank's risk profile through definition of the system of exposure limits including both internal and statutory limits and timely implementation of measures to mitigate the risk and operation within the set internal and external limits.

Control and monitoring of liquidity risk includes the process of monitoring compliance with internally defined limits, and monitoring of defined measures for reducing the bank's exposure to liquidity risk.

Liquidity risk control involves the control at all liquidity risk management levels as well as the independent control system implemented by the bank's organizational units responsible for internal audit and compliance monitoring.

Liquidity risk reporting consists of internal and external reporting systems and is performed on a daily basis and a set schedule according to the defined system. .

The Bank's operations are reconciled daily with legally prescribed liquidity ratio and narrow liquidity ratio. The legally prescribed minimum and maximum values for these ratios are defined for one working day, three consecutive working days and average for all working days within a month.

Limits Prescribed by the National Bank of Serbia	Liquidity Ratio	Narrow Liquidity Ratio
For one working day	Min 0,8	Min 0,5
For three consecutive working days	Min 0,9	Min 0,6
Average ratio for all working days in a month	Min 1	Min 0,7

**Compliance with externally defined limits of liquidity:**

	Liquidity Ratio		Narrow Liquidity Ratio	
	30.06.2013.	31.12.2012.	30.06.2013.	31.12.2012.
On	2,93	2,18	2,65	2,04
Average for the period	2,64	2,36	2,36	2,01
Maximum for the period	2,98	3,39	2,70	2,77
Minimum for the period	2,18	1,04	1,99	0,93

**Compliance with internally defined limits of liquidity:**

	Limits	30.06.2013.	31.12.2012.
GAP up to 1 month / Total assets	Max (10%)	12,21%	9,18%
Cumulative GAP up to 3 months / Total assets	Max (20%)	12,03%	9,21%

The Bank sets internal limits, based on the internal reporting on liquidity GAP.

The Bank's management believes that adequate diversification of the deposit portfolio per number and type of depositors as well as historical experience provide a solid basis for existence of a stable and long-term deposit base, i.e. no significant outflow of funds is expected thereof. In addition, the Bank has defined the appropriate Business plan, which in the future intends to make further diversification and the establishment of more stable deposit base and optimal capital structure and responsibilities.

The Bank's projected liquidity reserve on level adequate to cover the outflows in the regular course of business and outflows caused by the possible liquidity crisis, as confirmed by the results of stress testing and Liquidity contingency plan.

### 5.3. MARKET RISK

Market risk represents the possibility of occurrence of negative effects on the Bank's financial result and equity due to changes in market variables and comprises interest rate risk, currency risk for all business operations and price risk for all items in the trading book.

The Bank is exposed to interest rate risk, currency risk, risk of securities fluctuations, counterparty risk and risk of settlement related to trading book items. The trading book contains balance sheet and off-balance sheet assets and liabilities related to financial instruments that the Bank holds for sale or to hedge other financial instruments that are maintained in the trading book.

The Bank has established appropriate organizational structure, which allows for clear differentiation between the process of assuming market risks and the process of managing those risks. The Asset and Liability Management Committee and Investment Committee have the most significant role therein as well as other competent boards/committees, whose decisions can impact the Bank's exposure to this risk.

### 5.4. INTEREST RATE RISK

Interest rate risk represents the probability of negative effects on the Bank's financial result and equity through items of the banking general ledger due to adverse interest rate fluctuations. The exposure to this risk depends on the relation between the interest rate sensitive assets and liabilities.

The Bank manages the following types of interest rate risk:

- Repricing risk of temporal mismatch between maturity and repricing;
- Yield curve risk – to which the Bank is exposed due to changes in yield curve shape;

- Basic risk – to which the Bank is exposed due to different reference interest rates for interest rate sensitive items with similar maturity or repricing characteristics; and
- Optionality risk – to which the Bank is exposed due to contractually agreed optional terms – loans with an option of early repayment, deposits with an option of early withdrawal, etc.

Basic objective of interest rate risk management is maintaining the acceptable level of interest rate risk exposure from the aspect of the effect on the financial result, by conducting adequate policy of matching periods of interest rate repricing, matching adequate sources to investments per interest rate type and maturity, as well as projecting movements in the yield curve in both foreign and domestic markets.

Primarily, the Bank manages the internal yield margin through the prices of loans and deposits, focusing on the interest rate margin.

The Bank particularly considers the effects of interest rate changes and changes in the structure of interest-bearing assets and liabilities from the perspective of maturity, interest rate repricing and currency structure and manages the effect thereof on the economic value of equity.

The process of interest rate risk management consists of identification, measurement, minimizing, monitoring, control and interest rate risk reporting.

Identification of interest rate risk consists of comprehensive and timely identification of the causes and factors that lead to the occurrence of interest rate risk, which includes determining current interest rate risk exposure, as well as interest rate risk exposure arising from new business products and activities.

Measurement and assessment of interest rate risk at the Bank is performed through quantitative and/or qualitative assessment of identified interest rate risk by using the following techniques:

- GAP analysis;
- Ratio analysis;
- Duration;
- Economic value of equity; and
- Stress test.

Minimizing interest rate risk means maintaining this risk at a level that is acceptable for the Bank's risk profile. Alleviating interest rate risk refers to the process of defining the systems of limited exposure of the Bank to the interest rate risk and implementing measures for interest rate risk mitigation. Control and monitoring of interest rate risk entails the process of monitoring compliance with the established system of limits as well as monitoring defined measures for reducing the Bank's exposure to the interest rate risk. Control of interest rate risk refers to control on all management levels as well as an independent control system implemented by the organizational units responsible for internal audit and compliance monitoring.

Interest rate risk reporting consists of an internal system of reporting to competent boards/committees and the Bank's interest rate risk management bodies.

Internal limits are determined based on the internal report on the interest rate GAP, which includes all the balance sheet items.

**Compliance with internally defined limits for interest rate risk:**

	Limits	30.06.2013.	31.12.2012.
Relative GAP	Max 15%	(1,81%)	(4,42%)
Coefficient of disparity	0,75 – 1,25	0,98	0,94
EVE	Max 20%	6,47%	5,37%

During first quarter in 2013, interest rate risk ratios were within internally prescribed limits.

The Bank defined the internal limits of exposure to interest rate risk in order to limit the negative impact on the financial result and equity. The impact on the financial result is limited up to 1 year by limit defined in terms of repricing characteristics for significant currencies. The impact on equity is limited by the maximum value of the economic value of equity.

The Bank's management believes that appropriate compliance of positions per interest rate type and interest rate repricing period constitutes a solid prerequisite for existence with required financial results achieved and maintenance of economic value of equity.

## 5.5. CURRENCY RISK

Currency risk represents the possibility of negative effects on the Bank's financial result and equity due to fluctuations in exchange rates between currencies, fluctuations in the domestic currency with respect to foreign currencies or changes in the value of gold and other precious metals. All items in the banking book and the trading book that are denominated in a foreign currency and gold, including dinar items indexed to foreign currency clause are exposed to currency risk.

In order to minimize the currency risk exposure, the Bank diversifies the currency structure of its portfolio and currency structure of liabilities, reconciling open positions in certain currencies pursuant to the principles of maturity transformation.

The Bank has established appropriate organizational structure, which allows for clear differentiation between the process of assuming currency risk and the process of managing currency risk. The Asset and Liability Management Committee has the most significant role therein as well as other competent boards/committees, whose decisions can impact the Bank's exposure to this risk.

The process of currency risk management entails identifying, measuring, minimizing, monitoring, control and currency risk reporting.

In identifying currency risks, the Bank identifies in a comprehensive and timely manner the causes that lead to emergence of currency risk and includes the determination of current currency risk exposure, as well as currency risk exposure resulting from new business products and activities, by items that are recorded in the banking book and the trading book.

Measurement and assessment of currency risk in the Bank is performed through quantitative and/or qualitative assessment of identified currency risk by using the following techniques:

- GAP analysis and currency risk ratio;
- VaR analysis;
- Stress test;
- Back testing.

Relieving foreign currency risk entails maintenance of risk at an acceptable level for the Bank's risk profile through the establishment of a transparent system of limits and defining measures used to mitigate foreign currency risk.

Control and monitoring of the currency risk consists of observation and supervision of compliance with internally and externally defined limits as well as monitoring of defined and implemented measures.

Continuous monitoring and control of foreign currency risk during the day ensures timely undertaking measures for the purpose of maintaining the currency risk within defined limits. Foreign currency risk control means control at all management levels as well as independent control system implemented by the organizational units responsible for internal audit and compliance monitoring. Reporting on currency risk includes internal and

external reporting systems, it is performed on a daily basis and according to set schedules and in accordance with the defined system.

The Bank reconciles its business operations with the prescribed foreign currency risk ratio, which represents the ratio between the total net foreign currency balance and the position of gold relative to the Bank's regulatory capital.

**Survey of total risk foreign currency position and regulatory defined indicator of foreign currency risk:**

	30.06.2013.	31.12.2012.
Total risk foreign currency position	2.322.865	333.032
Indicator of foreign currency position	6,69%	0,82%
Regulatory prescribed limits	20%	20%

The Bank had complied with all the indicators of the regulatory values.

## 5.6. OPERATIONAL RISK

Operational risk represents the possibility of negative effects on the Bank's financial result and equity due to employee errors (intentional or accidental), inadequate procedures and processes in the Bank, inadequate management of information and other systems in the Bank, as well as occurrence of unforeseen external events. Operational risk includes legal risk.

Operational risk is defined as an event that occurred as the result of inappropriate or unsuccessful internal processes, employee and system actions or system and other external events, internal and external abuses, hiring and security practices at the workplace, customer receivables, product distribution, fines and penalties for infractions, damage incurred to property, disruptions in operations and system errors and process management.

The Bank monitors operational risk events according to the following business lines: corporate financing, trade and sales, retail brokerage services, corporate banking, retail banking, payment transfers, agency services and asset management.

The process of operational risk management represents an integral part of the Bank's activities conducted on all levels and ensures identification, measuring, relieving, monitoring and reporting continually on operational risks ahead of their realization, as in accordance with the legal requirements and deadlines. The existing process relies on known methods of measuring operational risk exposures, database on operating losses, an updated control and reporting system.

The Bank monitors operational risk events daily and manages operating risks. For the purpose of efficient operational risk monitoring, the Bank appoints employees who are in charge of operational risk with the objective of monitoring operational risk in its every organizational part, where such employees are responsible for accuracy and timeliness of information about all operational risk events that occur in their organizational unit, as well as for keeping records about all such events in the operational risk database.

Measurement and assessment of operational risk at the Bank is done through quantitative and/or qualitative assessment of identified operational risk. The Bank measures operational risk exposure through event records, self-assessment and stress testing. Self-assessment consists of assessment of risk exposure by organizational units based on the roadmap for identifying operating risks, through measurement of potential ranges and frequencies of events that can result in losses, identification of levels of control that business areas must maintain over these risks and measures of improvement. Stress test represents an operational risk management technique which is used to assess potential effects of specific events and/or changes in several financial variables on the Bank's exposure to operational risk.

The Bank cannot eliminate all operational risks, but by introducing a rigorous framework of control, monitoring and response to potential risks it is capable of managing these risks. The Bank takes measures in order to relieve

operational risks and ensure proactive response to events potentially creating operational risks through continued monitoring of all activities, application of adequate and reliable information system and by applying project approach orientation, the implementation of which helps improve the business practice and optimize the Bank's business processes.

Through reliable reporting on the implementation of measures undertaken to mitigate operational risks, the Bank has established a system for monitoring the activities undertaken by the Bank's organizational parts in order to reduce arising operational risks. The Bank assess the risk of entrusting third parties with activities related to the Bank's operations and based on the service contracts executed with such third parties which clearly define terms, rights, obligations and responsibilities of the contracting parties.

With the objective of smooth and continued operation of all significant systems and processes in the Bank, and to limit losses that could be incurred in extraordinary circumstances, the Bank adopted the Business Continuity Plan, in order to ensure the restoration and recovery of the information technology systems in the event of interruption or stoppage of operations, the Bank adopted the Disaster Recovery Plan.

#### **5.7. THE BANK'S INVESTMENT RISK**

The Bank's investment risk relates to the risk of investing in other entities and capital expenditures. The Bank's investments in a non-financial sector entity cannot exceed 10% of the Bank's equity, whereby such investments entail investments through which the Bank acquires equity interest or shares in a non-financial sector entity. The total Bank's investment in non-financial sector entities and Bank's own fixed assets cannot exceed 60% of the Bank's equity, but this restriction does not apply to the acquisition of shares for further trading and sales thereof within six months from the acquisition date.

#### **5.8. EXPOSURE RISK**

Large exposures of the Bank to a single entity or a group related entities, including Bank's related parties, are exposures amounting to over 10% of the Bank's capital.

In its operations, the Bank takes care of the compliance with statutory exposure limits:

- The Bank's exposure to a single party or group of related parties cannot exceed 25% of the Bank's equity;
- The Bank's exposure to a party that is related to the Bank cannot exceed 5% of the Bank's equity, while total exposure to the Bank's related parties cannot exceed 20% of the Bank's equity;
- The aggregate amount (sum) of the Bank's large exposures cannot exceed 400% of the Bank's equity.

The Bank's exposure to a single party or group of related parties, as well as exposure to the Bank's own related parties, were within the prescribed limits.

#### **5.9. COUNTRY RISK**

Country risk relates to the risk of the country of origin of the entity the Bank is exposed to, i.e. the possibility of negative effects on the Bank's financial result and equity due to inability to collect receivables from abroad and is caused by political, economic and social conditions in the borrower's country of origin. Country risk includes the following risks:

- Political and economic risk relates to the likelihood of losses due to the inability to collect the Bank's receivables because of deterioration in macroeconomic stability, due to limitations prescribed by government regulations or due to other structural changes in the economy of the given country;
- Transfer risk relates to the probability of losses due to the inability to collect receivables in a currency which is not the official currency in the borrower's country of origin, due to limitations to liability settlement toward

creditors from other countries in specific currency that is predetermined by the official state regulations and bylaws of state and other bodies of the borrower's country of origin.

Measurement of country risk is made per individual loans and advances and at the Bank's portfolio level. Measurement of exposure of an individual receivable to country risk is based on the country rating of the Bank's borrower's country of origin as defined by internationally recognized agencies, while measurement of portfolio exposure to country risk is based on setting limits to exposure in terms of a percentage of the Bank's equity, depending on the internal country rating category. The Bank measures and controls portfolio exposure to country risk by grouping receivables by level of risk of the borrower's country of origin.

For the purpose of adequate country risk control, the Bank defines exposure limits by countries or regions.

The Bank's investments approved to the borrowers domiciled outside of the Republic of Serbia for financing businesses in the Republic of Serbia, whose financial obligations to the Bank are expected to be settled from the operating results achieved in the Republic of Serbia, represent the Bank's receivables without exposure to the risk of the borrower's country of origin.

## **5.10. CAPITAL MANAGEMENT**

The Bank has established a risk management system in accordance with the volume and the structure of its business activities, and the objective of capital management is undisturbed implementation of the goals of the Bank business policy.

Calculation of capital and capital adequacy ratio is compliant with Basel II standards.

Basic goals for capital management are:

- preservation of minimum regulatory requirements;
- respect of the minimum regulatory capital adequacy ratio (12%);
- maintaining confidence in the security and stability of business operations;
- achievement of business and financial plans;
- supporting the expected growth in lending operations;
- enabling optimum of future resources of funds and their use;
- realization of dividend policy.

In 2013 the Bank adequately managed the capital, maintaining a stable capital base in order to:

- Ensure business continuity during unlimited period in foreseen future;
- Preservation of optimal capital structure;
- Minimizing the cost of capital;
- Provide protection from risk.
- Ensure growth, by widening the range of its services i.e. the Bank's development of new software and methodology solutions;
- Preservation of customer trust in the Bank's financial potential.

The Bank operates in accordance with regulatory limits:

- Minimum amount of the capital is EUR 10 million in dinar equivalent;
- Minimum capital adequacy ratio is 12%.

The Bank measures the capital adequacy with respect to regulatory methodology which is in compliance with Basel II standards, by using the standardized approach.

Indicator of capital adequacy	In thousands of RSD	
	30.06.2013.	31.12.2012.
Capital assets	44.118.024	50.696.348
Supplementary assets	5.594.777	5.329.728
Items deductible from assets	(15.017.032)	(15.648.210)
<b>Capital</b>	<b>34.695.769</b>	<b>40.378.866</b>
Credit risk-weighted assets	161.983.102	169.333.007
Exposure to operational risk	16.668.642	15.196.808
Exposure to foreign currency risk	2.322.865	-
<b>Indicator of capital adequacy</b>	<b>19,17%</b>	<b>21,88%</b>

## 6. EVENTS AFTER THE BALANCE SHEET AS AT 30.06.2013

The Regular General Meeting of the Bank's Shareholders was held on 30.07.2013 and the following was decided upon: distribution of a portion of retained earnings from 2012 into the Bank's credit risk reserve; and appointment of an external auditor for 2013.

## 7. EXCHANGE RATES

The exchange rates set at the inter-bank meeting of the foreign exchange market, applied to restatement of the balance sheet items into the Dinar (RSD), were the following for some major currencies on June 30, 2013 and December the 31<sup>st</sup> 2012:

Currencies	Official NBS exchange rate	
	2013	2012
USD	87.4141	86.1763
EUR	114.1715	113.7183
CHF	92.5440	94.1922
