ALFA-PLAM deals with the manufacturing of heating devices on solid, liquid and gaseous fuels, electric cookers, and a combination of solid fuel-electricity and electricity-gas. The company boasts a wide range of stoves, furnaces and fireplaces of recognisable design distinguished by quality and durability, which are primarily intended for households. Long-year production and a number of satisfied customers have led to recognisability of many products of Alfa-Plam.

In terms of scope of production, marketing and quality, the company is a leading manufacturer of heating items in Serbia and Southeast Europe, and ranks amongst the five largest producers in Europe.

Nowadays, production is carried out in 5 technical-technological entities, as per the group of products, that is:

- Solid fuel furnaces and stoves;
- Solid fuel fireplaces and stoves;
- Gas furnaces;
- Stoves, furnaces and fireplaces for floor heating;
- Stoves and hot plates

Total annual production is over 150,000 units. We permanently expand our production range in line with the requirements of the market, and new technologies are introduced with a purpose of increasing quality of product making. All products of the company have relevant home and foreign attestations, which fully meets the strict requirements for marketing in the EU market.

The company markets its products in the domestic market (about 40%) and in Europe's markets (about 60%). The basic export markets are former Yugoslav republics (Bosnia and Herzegovina, Macedonia, Montenegro, Slovenia and Croatia), then Germany, Italy, Austria and Poland

1.7. HISTORICAL DEVELOPMENT OF THE COMPANY

The beginnings of the company are related to distant 1948 when an enterprise that initially made products of sheet metal was established. The history of Alfa-Plam and its development over years is shown in the following overview:

- 1948 – Metalac, a town craftsmanship service enterprise was established in Vranje; the company had locksmith, blacksmith, electrical installation, horseshoe, wheelwright, and tin workshops. It produced tin pots, water buckets, troughs, and drum-like furnaces and tailor-made products.
- 1950 – Metalac had 58 employees.
- 1959. – Metalac put into operation a galvanising plant. The plant employed new four workers, who put black tin buckets into chemicals, and then into zinc that was oil-heated in a large boiler.
- 1960 – The company planned production and galvanising of 100,000 buckets.
- 1962 – A factory for tin packaging was constructed in the industrial district of Vranje; during the construction, the factory changed its production programme into production of various technical devices for wide use. The factory was named Alfa-Vranje Technical Device Industry, and employed 87 workers.
- 1964. – Alfa-Vranje won production of Feniks 140, a room oil-fueled furnace, a planned production of other appliances for households (electricity powered laundry

dryer, washing machine, hardware and furniture). The factory employed 300 workers. It exhibited Feniks 15.000 - an oil-fueled furnace for floor heating, at the Belgrade Technical Fair.

- 1965. – after 16 years of operation in premises without adequate conditions, Metalac got an adequate area in the industrial zone of Vranje, next to Alfa. The enterprise specialised in all craftsmanship and metal-installation works in civil engineering.
- 1967 – Business and technical cooperation between Alfa and the French manufacturer Henry Potez was established, and it resulted in production of oil furnaces Alfa Potez in Alfa, under Potez's license.
- 1968 – A new dye plant put into operation in Alfa.
- 1969 – Record annual production was achieved (the hundred thousandth Alfa-Potez furnace in that year was produced in October). Exports of 10,000 Alfa-Potez oil burning heaters to Hungary were contracted. Such a large quantity of heaters had not been exported at once by any producer of heaters in Yugoslavia. The factory employed 520 people.
- 1971 – Alfa-Vranje factory procured a crane with the capacity of up to 8 tons, for sheet metal unloading. By that time, the job had been performed by workers. A cooperation agreement was signed with Belgian Efel, a specialised company for production of gas stoves and solid and liquid fuel stoves, providing for exports of 30,000 fireplaces – oil heaters into Belgium.
 - Cooperation between Metalac, which currently had 200 employees and produced solid and liquid fuelled ovens and Alfa, which had 760 employees and produced ultramodern oil heaters was developed. The two companies were only divided by a wire fence.
- 1973 – Alfa won over production of solid fuel ovens and planned production of 6,000 unit in the first production series. Besides ovens, production of spring mattresses for the needs of the Simpo furniture factory and production of sinks were introduced.
- 1975 – It was concluded that Alfa had operated with loss, and that loss had resulted not only from the previous year but from earlier years as well. Bad business operation was caused by the global energy crisis and rising raw material prices, with concurrent impossibility of Alfa to reorient itself in programme terms. Despite decline of sales, starting in 1971, huge quantities of products were produced and held in stock. A recovery programme provided for referral of a part of workers to unpaid leave, a new job classification was made for 400 employees (200 less than currently employed), and minimum salaries were paid until the expected exit from the crisis.
- 1977 – Alfa ended the year without loss after many years of bad operation.
- 1978. – Alfa won production of gas-fuelled furnaces.
- 1980 – Alfa Technical Equipment Industry and Metalplam, the basic organisation of associated labour for production of goods for wide consumption (within Metalac) merged into a work organisation, MIV Vranje Metal Industry. The new work organisation had 873 employees. Total 230,000 heaters were produced.
- 1981 – Metal Industry Vranje became a part of SOUR Gorenje in Velenje (Slovenia).
- 1984 – Exports of 100,000 liquid fuel heaters for Algeria were contracted.
- 1989 – More than 243,000 heaters were produced, that is: 102,782 solid fuel stoves, 68,630 fuel oil furnaces, 44,766 gas heaters, and 27,062 solid fuel heaters.
- 1990 – The name of the company was changed into Alfa Plam.
- 1994 – Half a production was exported (Slovenia, Macedonia, Bulgaria and Albania).

-
- 1997 – General overhaul of the enameling plant was made and state-of-the-art equipment for enamel baking was installed (producer was the German WGT company). Investment amounting to DEM 500,000, realised from own funds.
 - 1998 – Production of electric stoves with ceramic top started, ISO 9001 quality system was introduced, and a process of proprietary transformation of the state-owned capital started. The company had 1,100 employees.
 - 2000 – In the first round of the proprietary transformation, 1,544 workers, former workers and pensioners became the owner of 70% shares of Alfa-Plam and acquired the pre-emption right in the purchase of the remaining 30% equity. The company was registered as a joint stock company.
 - 2001 – A computer-based highly productive line for laquering of metal parts was put into operation. Investment worth DEM 800,000. After the balance sheet for 2000, the first dividend was paid.
 - 2002 – Huge technological leap forward: in the Enameling plant 1 the overall equipment was replaced, a new technology of enameling with the procedure of 2 layers – 1 baking was introduced, and the whole procedure was automated (for the first time in Serbia). Alfa-Plam shares were quoted at the Belgrade stock exchange.
 - 2003 – Total production of 164,000 heater units. A serial production of a new solid fuel floor heating furnace, Alfa Term 20, started. In Vranje, the first selling and exhibiting room opened, and the whole production programme of this producer was displayed there.
 - 2005 – Equipment in the Enamel Plant II was replaced. The investment amounted to EUR 1,500,000, and was realised from own funds.
 - 2006 – A laser machine for punctuation and sheet metal stamping was procured, tools for new stoves and furnaces were made and the second phase of construction works in the Plant I was completed. The investments amounted to EUR 1,500,000, and were realised from own funds.
 - 2007 – The value of one share at the Stock Exchange reached record maximum of EUR 527.77 (at the middle exchange rate). Production of furnaces on pellet under the Italian technology was contracted for a renowned Italian customer. The company had 960 employees.
 - 2008 – A new technology with complete equipment for wet dyeing in Plant 2 was introduced along with a new tin tailoring line, and a press was purchased and installed. The total investment from own funds amounted to EUR 1,200,000. A marketing management project was drafted in service of further improvement of the market position of the company. A new logo of the company and motto: Alfa-Plam – Security and Warmth! were adopted.
 - 2009 – A robotic welding machine, a line for longitudinal and transversal tin cutting, 2 machines for sheet metal folding, a hydraulic press and other equipment were procured in the amount of about EUR 500,000. The company had 880 employees.
 - 2010 – Laser for sheet metal cutting and punctuation was purchased. Serial production of solid fuel furnaces for floor heating, Alfa Term 27 was launched. The company bought 12,500m² of constructed production storage area and about 13,000m² land in the immediate vicinity of its seat.
Dividend for the previous year, the tenth consecutive annual dividend, was paid to the shareholders.

- 2011 – Production of pellet burner furnaces was launched, an eccentric press was purchased, a line for electrostatic enameling was procured, along with waste water purification equipment, gas analyser.
- 2012 – Reconstruction of the administrative building was made, a steel plate grinding machine was procured, an enameling plant was procured, the foundation for a weighbridge was laid and a weighbridge was purchased, the management was changed, all services were reorganised, a new marketing service was introduced, new jobs were created, own shares were acquired.

- 2013 – Purchase of business areas (Bor, Surdulica, Niš, Subotica, Zemun), a restaurant providing meals for workers was restored with new equipment, a mechanical press and a radial drill were purchased, a new production hall was constructed.
- 2014- Business premises (Šabac , Subotica) were purchased, a boiler welding hall was constructed, a Trumpf laser cutting centre was opened, Amada press, enameling equipment, electrical forklifts, and new computers were procured.
- 2015 - Shopping mounting tape with the conveyor, welding generators, new presses Amada, purchase of industrial technology and brand, the beginning of construction of the assembly hall of the product pellet, the acquisition of modern forklift.

Today, Alfa-Plam is a joint stock company the shares of which are quoted freely on the stock exchange. It employs 669 workers, and continually improves quality of its products following the market trends thus showing its quality and justifying its position among the most successful enterprises in our country.

1.8. DATA ON THE COMPANY MANAGEMENT

The managing body of the company is the Board of Directors, which consists of 6 members, 2 executive, 4 non-executive. The members of the Board of Directors are:

Avram Milenkovic	Chairman of the Board of Directors, Non-Executive Director
Miroljub Hadzic	Non-Executive Director
Goran Kostic	Managing Director, Executive Director
Branislav Popovic	Executive Director
Miroljub Aleksic	Non-Executive Director
Igor Markicevic	Non-Executive Director

Efficient, responsible and transparent corporate management is one of the crucial factors contributing to the successful operation of the company. It is a precondition for a stable long-term growth and development of the company and further enhancing of competitiveness.

Guided by this principle, ALFA-PLAM is dedicated to the application of high standards in this area, which are constantly reconsidered and further developed. In this manner, the company strives to ensure responsible management of the Company, with a view of creating values for its shareholders and acquiring the trust of domestic and foreign customers, business partners, suppliers, employees and public in the company and its management.

1. GROUNDS FOR PREPARATION AND PRESENTATION OF FINANCIAL STATEMENTS

The enclosed financial statements are prepared in line with the applicable regulations in the Republic of Serbia based on the Law on Accounting (Official Gazette RS, No. 62/2013), which prescribes the International Accounting Standards (IAS), that is the International Financial Reporting Standards (IFRS) as the basis for compilation and presentation of financial statements.

A Decision of the Minister of Finance of the Republic of Serbia (No. 401-00-1380/2010-16 of 25 October 2010) defined translation of the basic IAS, or IFRS texts, which were issued by the International Accounting Standard Board until 1 January 2009, and interpretation issued by the Accounting Standard Interpretation Committee by 1 January 2009. Amendments of the existing IAS, that is IFRS and the standard interpretation, replacements of the applicable IAS with new ones that became effective starting from 1 January 2009 along with the application of new interpretations that entered into force in the following period, did not result in significant changes in the accounting policies of the company or did not have any substantially significant influence on the financial statements in the period of initial application. Besides the fact that many of those applications were not applicable to the operation of the company, the management of the company does not express explicit and unreserved statement of the compliance of the financial statements with IAS and IFRS, which apply to period shown in the enclosed financial statements.

The financial statements were prepared in line with the historical cost concept and the going concern concept of the company.

The financial statements were prepared in the format prescribed by the Rules on the Forms and Content of Financial Statement Forms to be Completed by Business Companies, Cooperatives and Entrepreneurs (Official Gazette of the Republic of Serbia Nos. 95/2014 and 144/2014), which derogates from the manner of presentation of some balance items as provided by IAS 1 – Presentation of Financial Statements. Accordingly, the enclosed financial statements are not adjusted to all requirements IAS and IFRS.

According to the Law on Accounting, the financial statements include: balance sheet, income statement, other comprehensive income, cash flow statement, statement on changes in equity, and notes to the financial statements.

In preparing these financial statements, the company applied the accounting policies disclosed in Note 3, which are based on the applicable accounting and tax regulations of the Republic of Serbia.

2. REVIEW OF SIGNIFICANT ACCOUNTING POLICIES

2.1. Use of estimate

Preparation and presentation of financial statements in line with IAS and IFRS and the accounting regulations in the Republic of Macedonia requires the management of the company to use the best possible estimates and reasonable assumptions, which have effects on the amounts expressed in the financial statements and notes to the financial statements.

These estimates and assumptions are based on information available on the date of the balance sheet.

The most significant estimates relate to determination of impairment of financial and non-financial assets, recognition of deferred tax assets, definition of provisions for court proceedings and definition of assumptions necessary for actuarial calculation of fringe benefits to employees based on severance pay, and they are disclosed in corresponding accounting policies and/or notes to the financial statements.

2.2. Calculation of foreign currencies and the accounting treatment of exchange rate differences and effects of the currency clause

Items included in the financial statements of the Company are measured using the currency of the principal economic environment in which the Company operates (“functional currency”). The financial statements are presented in thousand RSD, which is the functional and reporting currency of the Company.

All assets and liabilities in foreign currencies are calculated on the day of the balance in their RSD counter value applying the official middle exchange rate of the National Bank of Serbia applicable on that day. Business changes in foreign currencies over the year are calculated in the RSD counter value using the official middle exchange rates of the National Bank of Serbia applicable on the day of change.

FX gains and FX losses that occurred in calculation of assets and liabilities expressed in foreign currencies and calculation of transactions during the year are recorded in the income statement, as financial income, that is financial expense.

Positive and negative effects of agreed foreign currency clauses in relation to assets and liabilities, which occurred using the agreed exchange rate, are also expressed as part of financial income, that is, financial expense.

2.3. Comparative data

Comparative data consists of quarterly financial statements of the company for 2015, which were the subject of auditing.

2.4. Income from operation

Income from sale is expressed in the amount of invoiced realisation, i.e. performed sale to the end of the accounting period, under the condition that on that day the debt creditor relationship occurred on that day and an invoice was issued. Income is measured at fair value of the received compensation or receivable, taking into account the amount of all trade discounts and quantity rebates which the company grants. The difference between the fair value and the nominal amount of the compensation is recognised as income from interest.

Income from sale is recognised when all conditions are met:

/a/ The company has transferred on the customer all significant risks and benefits from ownership;

/b/ The management of the company retains neither the influence on the management to the extent that is usually related to ownership nor control of the products and goods sold;

/c/ When it is possible to measure reliably the amount of income;

/d/ When any change in operation will probably be followed with an inflow of economic benefits into the company and

/e/ When costs incurred or to be incurred in relation with the change in operation can be measured reliably.

Income from services is expressed proportionately to the level of completion of service on the day of balance.

2.5. Expenses from operation

Total expenses from operation are: costs of the merchandise sold; decrease of finished goods, work in progress and services in progress; costs of material; costs of fuel and energy, costs of salaries, fringe benefits and other personal expenses; costs of production services; costs of depreciation, costs of long-term provisions; non-production costs, decreased for income from the own use of products, services and merchandise, and increase of finished goods, work in progress and services in progress.

The basic elements of the expense recognition principle are as follows:

/a/ Expenses are recognised, i.e. recorded and expressed when decrease of future economic benefits that is related to decrease of assets or increase of liabilities can be measured reliably;

/b/ Expenses are recognised based on the immediate relation of expenses with income (causality principle);

/c/ When economic benefits are expected to inflow over several accounting periods, and the connection with income can be established in a wider sense or indirectly, expenses are recognised using the systemic and reasonable allocation procedure;

/d/ Expenses are recognised when expense does not bring any economic benefits or when and up to the amount to which future economic benefits do not meet the conditions or have stopped meeting the conditions for recognition in the balance sheet as assets;

/e/ Expenses are also recognised in those cases where a liability occurs without concurrent recognition of an asset.

Costs of the merchandise sold in wholesale are determined in the amount of the selling value of wholesale merchandise, decreased by the amount of the determined difference in price and calculated VAT contained in the value of the merchandise sold in wholesale.

Costs of the merchandise sold in retail are determined in the amount of income from merchandise sold, decreased by the amount of the determined difference in price, and the amount of calculated VAT, contained in the value of the merchandise sold in retail.

2.6. Borrowing costs

Borrowing costs that are directly attributable to acquisition, construction or production of a qualifying asset are included in the cost/price of that asset. Other borrowing costs are recognised as expenses.

2.7. Financial income and expenses

Financial income and expenses include: income and expenses incurred with parent companies and subsidiaries; income and expenses from interest – from third parties (independent if they have become due or are paid or attributable in the amount of receivable or liability on the day of balance); income and expenses from exchange rate differences and the currency clause effects – towards third parties; and other financial income and expenses.

Income from dividend is recognised as income in the year when it is approved for disbursement.

2.8. Gains and losses

Gains represent increase of economic benefits, and include income that occurs in case of sale of non-current assets at the value higher than their book value, then not realised losses from sales of market securities (in case valuation of securities is made at their market values), and gains that occur at the increase of book value of non-current assets due to the cessation of conditions for decrease of their value.

Losses occur based on sale of assets at prices lower than their book value, then based on writing-offs of unwritten fixed assets, based on damages that may be compensated in full or partially from an insurance company, based on application of the imparity principle (impairment of assets).

2.9. Intangible assets

An intangible asset is a definable non-monetary asset without physical content:

- that serves for production or delivery of goods and services, for lease to other persons or is used for administrative purposes;
- that the company controls as a result of past events; and
- from which an inflow of future economic benefits is expected.

Intangible assets consist of: investment in development; concessions, patents, licenses and similar rights; other intangible investment; intangible investment under construction and advances for intangible investments.

Purchase of intangible assets during the year is recorded at cost. Cost represents the invoiced value of the assets acquired, plus all associated costs of procurement and costs of bringing into use. Costs of intangible assets produced within the company are direct costs and indirect related costs, which relate to the investment.

Costs of borrowing that occurred by the point of putting intangible assets into use are capitalised, that is, included in the cost value.

After being recognised as an asset, intangible assets are stated at purchase value or at cost decreased by the total amount of calculated depreciation and total amount of loss due to impairment.

On the day of each balance sheet, the company estimates whether there is an indication that the asset may be impaired. If there is such an indication, the company evaluates the amount of the asset that can be recovered. If the recoverable value of the asset is lower than its book value, the book value is reduced to the recoverable value, and the expense for the period is recognised by the amount of loss from impairment of value.

If on the day of balance there are indications that previously recognised loss from value impairment does not exist or is decreased, estimate of the recoverable value of that asset is made. Loss from impairment of value recognised in previous years is recognised as income, and the book value of this asset increases until the recoverable value.

Additional expense that relates to already recognised intangible assets, is attributed to the expressed amount of that asset, if it is probable that inflow of future economic benefits will be higher than the initially estimated rate of proceed of that asset.

The company recognises costs of replacement of some parts of intangible asset in the book value of that item, at the point when costs occur and the criteria of recognition under IAS 38 - Intangible asset (paragraph 21) are met.

Any other recoverable expense is recognised as expense in the period in which it occurred.

Intangible assets cease to be expressed in the balance sheet after their disposal or when the asset is permanently withdrawn from use and its disposal is not expected to produce any future economic benefits.

Gains and losses that arise from the writing-off or disposals are determined as difference between the estimated net inflows from sales and expressed amount of the asset and is recognised as income or expense in the income statement.

2.10. Property, plant and equipment

Property, plant and equipment are tangible assets:

- that the company holds for use in the production or delivery of goods or rendering services, for lease to other parties or for administrative purposes;
- which are expected to be used longer than one accounting period; and
- whose individual purchase price at the time of purchase is higher than the average gross salary per employee on the national level, according to the latest released data of the national authority competent for the statistics affairs.

The purchase value/cost of property, plant and equipment is recognised as an asset if, and only if:

- it is likely that future economic benefits related to that asset will inflow into the company; and
- purchase value/cost of that asset can be determined reliably.

Purchase of property, plant and equipment over the year is recorded at cost.

Cost represents the invoiced value of the assets acquired, plus all associated costs of procurement and costs of bringing the asset into use. Cost of the said intangible assets produced within the company are direct costs and indirect related costs, which relate to that investment.

Costs of borrowing that occurred by the point of putting intangible assets into use are capitalised, that is, included in the cost value.

After being recognised as assets, property, plant and equipment are stated at purchase value or at cost decreased by the total amount of calculated depreciation and total amount of loss due to impairment.

On the day of each balance sheet, the company estimates whether there is an indication that the asset may be impaired. If there is such an indication, the company evaluates the amount of the asset that can be recovered. If the recoverable value of the asset is lower than its book value, the book value is reduced to the recoverable value, and the expense of the period is recognised as an amount of loss due to impairment.

If on the day of balance there are indications that previously recognised loss from value impairment does not exist or is decreased, estimate of the recoverable value of that asset is made. Loss from impairment of value recognised in previous years is recognised as income, and the book value increases until the recoverable value.

Additional expense that relates to already recognised property, plant and equipment is attributed to the expressed amount of that asset, if it is probable that inflow of future economic benefits will be higher than the initially estimated rate of proceed of that asset and that the purchase value/cost of the additional expense can be determined reliably.

The company recognises costs of replacement of some parts of property, plant and equipment in the book value of those items, at the point when those costs occur and the criteria of recognition under IAS 16 - Property, plant and equipment (paragraph 7) are met.

Any other recoverable expense is recognised as expense in the period in which it occurred.

Urban land is expressed separately from the value of property at cost (or as residual value of property that is on that land), and additional valuation is done in the same manner as with property, plant and equipment.

Depreciation of land is not carried out.

Property, plant and equipment cease to be expressed in the balance sheet after their disposal or when the asset is permanently withdrawn from use and its disposal is not expected to produce any future economic benefits.

Gains and losses that arise from the writing off or disposal are determined as difference between the estimated net inflows from sales and expressed amount of the asset and is recognised as income or expense in the income statement.

2.11. Investment property

Investment property is property (*part of a building*) which the company holds as the owner with a view of making earning from rental of the property or increasing the value of capital or both, not with a view of using it for production or supply of merchandise or rendering services or for the needs of administrative operation, or for sales within regular operations.

Initial measurement of investment property is made at purchase value or cost. At initial measurement, associated costs of procurement are included in the purchase value or cost.

After initial recognition, investment property is measured at purchase value or cost decreased by the total amount of allowance based on depreciation and the total amount of allowance for impairment.

2.12. Depreciation

Calculation of depreciation shall be made from the beginning of the next month in relation to the month when asset was put into use.

Depreciation is calculated by the proportionate method using the rates that are determined based on the estimated useful life of the asset.

The basis for calculation of depreciation of an asset is purchase value.

The useful life, that is depreciation rates, are reconsidered periodically and if expectations are based on new estimates that are significantly different from previous ones, calculation of costs of depreciation for the current and future periods is adjusted.

Depreciation rates for the main categories of property, plant and equipment are given in the following overview:

Intangible assets	15.00%
Buildings	rates 2.00 to 2.50%
Production equipment	rates 7.00 to 15.00%
Passenger and commercial carrier vehicles	rates 10.00 to 15.50%
Office equipment	rates 5.00 to 10.00%
Computer equipment	rates 20.00 to 30.00%

Calculation of depreciation for taxation purposes is made in line with the Corporate Income Tax Law of the Republic of Serbia and the Rulebook on the Manner of Classification of Fixed Assets in Groups and Methods of Determining Depreciation for Tax Purposes, which results in deferred taxes.

2.13. Impairment of assets

Pursuant to the accounting policies, the management of the company verifies on every day of the balance whether there are indicators of impairment of assets. In case such indicators exist, the company evaluates the recoverable value of assets.

Recoverable amount is defined as higher than net selling price and the use value. Net selling price is the amount that can be obtained at sales of assets in a transaction between two willing independent parties, decreased by costs of sale, whereas value in use is the current value of the estimated future cash flows which are expected to occur from continuing use of assets through their economic life and sales at the end of life.

The recoverable amount is estimated for any separate asset or, if that is not possible, for a unit that makes money which that asset belongs to. Where the book amount exceeds that estimated recoverable amount, value of assets is decreased to their recoverable amount. Loss from impairment is recognised in the amount of difference, charged to expenses in compliance with IAS 36 - Impairment of assets.

The management of the company has estimated that there are no indicators of impairment of assets as at 30 September 2016 so that impairment of assets has not been made.

2.14. Inventories

Inventories of merchandise and material are measured at purchase value. Purchase value represents all purchase costs for bringing inventories to their current place and state.

Costs of procurement include purchase price, import duties and other liabilities (except for those the company can recover additionally from tax authorities), transportation costs, manipulation costs and other costs that can be attributed to the procurement directly. Discounts, rebates and other similar items shall be deducted when determining the cost of goods.

Output of inventories of materials and merchandise is recorded with the method of average weighed price.

Inventories of work in progress and finished goods are measured at cost, that is net selling value, if it is lower. Cost represents all costs of conversion and other occurred costs necessary for bringing of inventories to their current place and state, that is:

- costs of direct work;
- costs of direct material; and
- indirect, that is general production costs.

Value of inventories of work in progress and finished goods does not include the following, or the following represents expense for the period:

- unusually high waste of material, manpower or other production costs;
- costs of storage, except if those costs are not necessary in the production process before the following phase of production;
- overhead costs of administration that do not contribute to bringing inventories to the current place and in the current state; and
- costs of sale.

Net sale value is the estimated sale value less estimated costs of sale and estimated costs of finalisation (with work in progress). If net sale value of inventories of work in progress and finished goods is lower than their cost, partial writing off to the net sale value is made.

By charging other expenses, allowance for inventories is made in cases where it is estimated that the value of inventories should be reduced to their net sale value.

Damaged inventories and inventories that do not meet the standards with their quality are written off in full.

Inventories of goods in retail are expressed at sale price over the year. At the end of the accounting period, reducing the value of inventories to the purchase value is made via allocation of realised difference in price and value added tax, calculated on the average basis, on the value of inventories in the balance at the end of the year and purchase value of the goods sold.

2.15. Financial instruments

Financial investments are financial assets that are measured during their initial recognition at their purchase value, which is a fair value of compensation given for them. Costs of transaction are included in the initial measurement of all financial assets.

For the needs of measurement of a financial asset upon the initial recognition, financial assets are classified in four categories:

- (a) financial assets held for trade, initially recognised at fair value through profit or loss;
- (b) investments that are held to maturity;
- (c) loans and receivables derived from the company, which are held for trade and
- (d) financial assets available for sale.

A financial asset is classified as a financial asset held for sale if it does not belong to any of the remaining three said categories of financial assets.

A financial asset is classified as a financial asset held for trade, not as a financial asset available for sale, if that asset is a part of a portfolio of similar assets for which there is a pattern of trade with a view of making profit from short-term fluctuations of prices or dealer's margin.

After initial recognition, the company measures financial assets, (including derivatives that are assets) at their fair values, without any decrease for transaction costs that it can incur during sale or other disposal, except:

- Loans and receivables and investments that are held to maturity, which are measured at depreciated price, using the method of effective interest rate;
- Investment in proprietary securities that are not quoted in the active market, whose fair value cannot be measured reliably, which are measured at purchase price.

In Serbia, there is no sufficient market experience, stability and liquidity at purchase and sale of financial assets and official market information is not available any time. Therefore, the fair value most often cannot be established reliably in the conditions of lack of active market, such as IFRS require so.

Recognised gain or loss that derives from changes in fair value of a financial asset or liability (that is not a part of the hedging relationship), initially recognised at fair value through profit or loss, is recognised as gain or loss in the balance sheet, and with financial assets available for sale at revaluation reserves.

Financial assets are initially valued at fair value, increased by the costs of transactions (except for the financial assets or financial liabilities that are valued at fair value through the income statement), which are directly attributable to procurement or issuing of a financial asset or a financial liability. Financial assets and liabilities are recorded in the balance sheet of the company from the moment when the company is bound under contract to the provisions related to the instrument.

The management makes the classification of its financial investments at the time of initial recognition. The classification depends on the purpose for which the financial assets were acquired.

Financial assets cease to be recognised when the company loses control over the contracted rules over those instruments. A financial liability ceases to be recognised where the company meets its obligation or where the liability to payment provided for under a contract has been repealed or has expired.

Financial instruments in line with IAS 39 – Financial instruments: Recognition and weighing, include the following categories of financial instruments:

- (a) Financial instrument or financial liability at fair value through income statement;
- (b) Investments held to maturity;
- (c) Loans and receivables;
- (d) Financial assets available for sale;

2.15.1. Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in the active market, except:

-
- (a) assets that the company intends to sell immediately or within a short period, which would then be classified as assets held for trade and those which the company, after initial recognition, denotes at fair value through income statement;
- (b) those that the company, after initial recognition, denotes as available for sale; or
- (c) those for which the holder cannot recover in a significant measure its overall initial investment except if it is not due to worsening of a loan, which will be classified as available for sale.

Share acquired in the package of assets that are not loans or receivables (for example, share in a mutual fund or similar funds) is not a loan or receivable.

2.15.2. Financial assets available for sale

Financial assets available for sale are non-derivative financial assets that are denoted as available for sale and are not classified as (a) loans and receivables (b) investments held to maturity or (c) financial assets denoted at fair value through income statement.

2.16. Short-term receivables and investments

Short-term receivables include trade receivables from domestic and foreign associated legal entities and other trade receivables - domestic and foreign based on sales of products, goods and services.

Short-term investments include loans, securities and other short-term investments with maturity, i.e. sale of up to one year from the date of action, that is date of the balance.

Short-term trade receivables shall be measured at the cost from the original invoice. If the value in an invoice is expressed in a foreign currency, conversion into the reporting currency is made at the exchange rate applicable on the day of the transaction. Changes of the exchange rate from the date of the transaction to the date of collection of receivables are expressed as foreign exchange differences on behalf of income or will be charged to expenses. Receivables expressed in a foreign currency on the day of the balance are calculated according to the applicable exchange rate of NBS, and foreign exchange differences are recognised as income or expense of a period.

Short-term financial investments held for trade are measured at the depreciated value, not taking into consideration the intent of the company to hold them to maturity.

If there is probability that the company will not be able to collect all due amounts (principal and interest) according to contracting conditions for given loans, receivables or investments held to maturity, which are expressed at depreciated value, loss due to impairment or non-collected receivables has occurred.

On the day of the balance, the management of the company assesses collectability of receivable. Receivables whose 60-day term from the date of maturity for collection has expired on the date of the balance, are corrected indirectly at the expense of expenses for the period, without previously made assessment by the management, but obligatorily with a written decision of the Board of Directors.

In non-collectability is certain, direct writing off of those receivables is made by a decision of the company board of directors.

2.17. Cash and cash instruments

Cash equivalents and cash are included in assets on accounts with banks, cash in hand, and highly liquid assets with the initial term of maturity up to three months or shorter, which can be converted in known amounts of cash with insignificant risk of changes in value.

2.18. Provisions, potential liabilities and potential assets

Provisions are recognised when the company has a legal or contracted obligation as a result of past events, when it is more probable than not that the settlement of the obligation will require outflow of resources, and when the amount of the obligation can be estimated reliably.

Provisions for severance pay and jubilee awards are weighed for current value of expected future outflows using the discount rate that reflects interest at high quality securities that are expressed in a currency in which liabilities for pensions will be paid.

Provisions for judiciary proceedings are formed in the amount that corresponds to best assessment of the management of the company in terms of expenses that will occur in order to meet such liabilities.

Potential liabilities are not recognised in financial statements, they are disclosed in the notes to the financial statements, except if the probability of outflow of resources that contain economic benefits is very small.

The company does not recognise potential assets in financial statements but discloses them in the notes to the financial statements, if an inflow of economic benefits is probable.

2.19. Employee benefits

2.19.1. Taxes and contributions for compulsory social insurance

In line with the regulations applied in the Republic of Serbia, the company is obliged to pay contribution to different state funds for social insurance. These obligations include contributions charged to employees and charged to employer in amounts that are calculated using the legally prescribed rates. The company has legal obligation to make suspension of calculated contributions from gross salaries of employees and on their behalf make transfer of the suspended funds on behalf of respective state funds. The company is not obliged to pay to employees after they retire contributions that are obligation of the pension fund of the Republic of Serbia. Contributions charged to employees and charged to employer are booked as costs in the period which they relate to.

2.19.2. Liabilities based on severance pay and jubilee awards

In line with the Labour Law (*Official Gazette of the Republic of Serbia* Nos. 24/2005, 61/2005, 54/2009, 32/2013, and 75/2014) and the Individual General Act on Labour, the company is obliged to pay severance pay at retirement in the amount of 2 monthly gross salaries which the employee made in the month preceding the month in which severance is paid, which cannot be lower than 2 monthly average gross salaries paid in the company in the month preceding the month in which severance is paid.

In addition, the company is obliged to pay jubilee awards amounting to one half to three average monthly salaries. The number of monthly salaries for jubilee awards is determined based on the number of years the employee spent in the company.

Calculation and expression of long-term liabilities based on severance pay and jubilee awards is made using the method of present value of future expected disbursements, based on the actuarial calculation.

The company charges severance pay to current expenses. The management of the company is of opinion that the current value of defined long-term benefits to employees is not substantially significant so the enclosed financial statements do not contain provisions on the above grounds in the amount of their present value, in line with the requirement of IAS 19 - Employee Benefits.

2.19.3. Short-term paid leave

Accumulated paid leaves may be transferred and used in further periods, if they were not used in full in the current period. Expected expenses of paid leave are recognised in the amount of cumulated unused rights on the day of the balance, which are expected to be used in the following period. In case of non-accumulated paid leave, liability or cost is not recognised to the point when a leave is used.

2.19.4. Share in employee earnings

The company recognises liabilities and cost for share in employee earnings in line with the Decision of the Board of Directors or another decision of the management of the Company.

2.20. Income Tax

2.20.1. Current tax

Tax expense of the period is an amount that is calculated and paid in line with provisions of the Corporate Income Tax Law (*Official Gazette of the Republic of Serbia*, Nos. 18/2010, 101/2011, 119/2012, 47/2013, 108/2013 and 68/2014 - 142/2014, 91/2015 -Authentic Interpretation, 112/2015). Income tax is calculated at the rate of 15% on the tax basis that is shown in the tax balance, upon deduction for used tax credits. The taxable basis includes gain expressed in the income statement, which has been corrected in line with tax regulations of the Republic of Serbia.

Unused part of the tax credit may be transferred onto the account of income tax from future accounting periods, but not longer than 10 years. Loss from the current period may be used for reducing the tax basis of future accounting periods, but not longer than 5 years.

2.20.2. Deferred taxes

Deferred income tax is calculated for all temporary differences between the tax basis of assets and liabilities and their book value. Currently applicable tax rates on the day of balance sheet are used to calculate the amount of deferred tax. Deferred tax liabilities are recognised for all taxable temporary differences. Deferred tax assets are recognised for deductible temporary differences and for effects of the transferred loss and unused tax credits from previous periods to the level to which it is probable that future taxable gains will exist, to which deferred tax assets can be charged.

Current and deferred taxes are recognised as income and expenses and are included in the net profit for the period.

2.21. Earnings per Share

The company calculates and discloses the basic earnings per share. The basic earnings per share is calculated dividing net earnings that belong to shareholders, holders of ordinary shares of the company, weighed with the average number of issued ordinary shares during the period.

2.22. Distribution of Dividend

Distribution of dividend to shareholders of the company is recognised in the financial statements of the company as liability in the period in which the shareholders of the company approved dividend.

If dividends are published after the date of the balance sheet, but before the financial statements are approved for publications, these dividends are not recognised as liability on the date of the balance sheet,

because they do not meet the criterion of the current liability in line with IAS 37 - Provisions, Contingent Liabilities and Contingent Assets. Such dividends are disclosed in the notes to the financial statements, in line with IAS 1 - Presentation of Financial Statements.

2.23. Related Party Disclosure

For the purposes of these financial statements, the legal entities are treated as associated if a legal entity has a possibility to control another legal entity or make significant influence on the financial and operational decisions of the other entity, which is defined in IAS 24 Related Party Disclosure.

Relations between the company and its related parties are regulated on a contractual basis and under market conditions. The states of receivables and liabilities on the day of the balance sheet and transactions during reporting periods that occurred with related parties are specially disclosed in the notes to the financial statements.

2.24. Fair Value

The business policy of the company is to disclose information on the fair value of assets and liabilities for which there are official market information even when fair value significantly differs from the book value. In the Republic of Serbia, there is no sufficient market experience, stability and liquidity at purchase and sale of receivables and other financial assets and liabilities since official market information is not available any time.

Therefore, fair value cannot possibly be determined with reliability in the absence of an active market. The management of the company makes assessment of risk, and in cases where it is seen that the value at which assets are kept in business books will not be realised, allowance for impairment is made.

3. FINANCIAL RISK MANAGEMENT

In its regular operation, the company is exposed to certain financial risks to a different scope, such as:

- Credit risk,
- Market risk (which includes risk of change of foreign exchange rates, risk of change of interest rates i risk of price change) and
- Liquidity risk.

Management of risks in the company is focused on endeavour to minimise potential adverse influences on financial state and operations of the company in a situation of unpredictability of financial markets. Risk management is defined in the *Rulebook on the Internal Control System and Risk Management*.

3.1. Credit Risk

Credit risk is risk that one party in the financial instrument, by failure to meet its obligations, causes financial loss to the other party.

Credit risk occurs with cash and cash equivalents, deposits in banks and financial institutions, receivables of legal and natural persons and assumed obligations.

3.2. Market Risk

Risk that fair value or future cash flows of the financial instrument will fluctuate due to the change in market prices. Market risk consists of three types of risks:

- Currency risk,
- Interest rate risk; and
- Other risks of change of price.

3.2.1. Risk of change of foreign exchange rates

Currency risk is risk that fair value or future cash flows of the financial instrument will fluctuate due to the change in exchange rate.

Currency risk (or risk of exchange rate changes) occurs with financial instruments that are denoted in a foreign currency, i.e. currency that is not functional currency in which they are weighed.

3.2.2. Risk of change of interest rates

Risk of change of interest rates is risk that fair value or future cash flows of the financial instrument will fluctuate due to the change in market interest rates.

Interest rate risk occurs with interest bearing financial instruments recognised in the balance sheet (e.g. loans and receivables and issued debt instruments) and with some financial instruments that are not recognised in the balance sheet (e.g. some liabilities for loans).

3.2.3. Risk of change in price

Risk of change in price is risk that fair value or future cash flows of the financial instrument will fluctuate due to the change in market prices (other than those that occur from risk of interest rate or currency risk), whether those changes are caused by factors specific for individual financial instrument or its issuer, or the factors influence on all similar financial instruments that are traded in the market.

Risk of change in price occurs with financial instruments due to change, for example, in prices of goods or prices of capital.

3.3. Liquidity Risk

Liquidity risk is risk that the company will have difficulties in settling obligations related to financial liabilities.

4. CHANGES IN ACCOUNTING POLICIES AND SUBSEQUENTLY DETERMINED ERRORS

An amount that changes taxable profit or loss in the tax balance by more than 2% is seen as a substantially important error. If the amount of error is lower, correction is made through the income statement of the current year.

Substantially important effects of changes in accounting policies and subsequently determined errors are corrected retroactively while adjusting comparative data in financial statements, except if it is practically impracticable (then, change in accounting policy applies prospectively).

Total fixed assets	5.718.276	2.886.137	2.832.139

6.3 LONG-TERM FINANCIAL INVESTMENTS

Shares in capital represent long-term financial investments in (regular or preferential) shares and market, bank and insurance company shares.

Capital shares are expressed:

- according to the purchase value method, under which an investor expresses its investment at purchase value. The investor recognises income only to the extent in which it receives its part from distribution of retained net profit of user of investment, which is obtained after the day the investor acquired it. A part from distribution that is accepted in the amount higher than such profit is regarded as return of investment and expressed as decrease of purchase value of investment.

- in line with IAS 39, in the manner described in point 3(l).

Shares in capital relate to shares with:

	30.09.2016 RSD thousand	31.12.2015 RSD thousand

Other equity capital	46,048	46,048
In All	1,217,288	1,217,288

Equity capital consists of 174,812 common shares of individual nominal value of RSD 6,700.00.

Share capital - common shares include founding shares and emitted controlling shares during the operation, with the right to taking part in the profit of the joint stock company and to a part of bankruptcy estate in line with the articles of association, i.e. decisions on share emission.

Adjustment to the Central Registry of Securities has been made.

Adjustment to the Business Registers Agency has been made.

Other core capital has been created by re-booking of sources of out-of-operation assets.

6.14 OWN SHARES PURCHASED

A decision on acquisition of own shares or other securities of the joint stock company was adopted by the Board of Directors on 18 September 2012.

The company will acquire own shares in the regulated market – Beogradska berza with a view of preventing disturbances in the security market from the values and preventing a higher and immediate damages for the company.

The Board of Directors thinks that the price of the company shares at this point does not reflect fair value of the company and there is a danger, because of non-economic reasons that are not related to the operation, for the share value to decline, and hence, the value of the company that recorded positive business results in the previous years.

Any failure to respond to the decline in prices might damage shareholders, by forming excessive supply at low price, so that potential investors may be misled that shares they intend to buy or own do not have adequate market valuation.

	30.09.2016 RSD thousand	31.12.2015 RSD thousand
Own shares purchased	117.116	117,116
In All:	117.116	117,116

THE COMPANY OPERATION REPORT

ABOUT THE COMPANY - GENERAL INFORMATION

Our main activity is manufacture of heating devices for solid, liquid and gaseous fuel, electric stoves, and a combination of solid fuel-electricity and electricity-gas stoves. Alfa-Plam's products are mainly intended for households.

By the scope of production, the placement and the quality we are the leading manufacturer of heating devices in Serbia and South-East Europe, ranging among the five largest in Europe as well.

At present, we realise the production in 6 technical and technological unities, according to the groups of products, such as:

1. Solid fuel stoves and furnaces
2. Solid fuel fireplaces and furnaces
3. Gas furnaces
4. Stoves, furnaces and fireplaces for floor heating
5. Stoves and hot-plates
6. Furnaces, stoves and pellet boilers

Our total annual production exceeds 160,000 units. We permanently expand the range of products in line with the market demands, and in order to increase the quality of the production we keep introducing new technologies. All our products have adequate domestic and international certificates, thus making us entirely compliant with the strict requirements for placing of products on the EU market.

We sell our products on the domestic market (35%) and on the European market (about 65%). The basic export markets are former Yugoslav republics (Bosnia and Herzegovina, Macedonia, Montenegro, Slovenia and Croatia), and then Germany, Italy, Austria and Poland.

ABOUT THE COMPANY - REWARDS AND RECOGNITIONS

At the ceremony marking the 11 "Best of Serbia 2014" which is traditionally organized by Serbian Chamber of Commerce, the Ministry of Trade and Economic Review Journal last night in Belexpocentru declared the 24 best brand on the market Srbije. Među winners Alfa Plam is the only company that has won even two awards: "best exporter" and the "introduction of a new brand - Commo." (We recall that the company last year was the recipient of awards for best corporate brand in Serbia in 2013) .In the name of the company Alfa Plam, awards were received Dragi Stojanović - Head of the unit Assembly and Dragan Stojanovic - transport worker, a forklift driver in work unit Welding and locksmith tinsmith jobs, in line with the innovations introduced by the Serbian Chamber of Commerce introduced this year that the awards handed to selected employees.

Goran Kostic, Managing Director of the company in a statement to the media said: "Alfa Plam is among the five largest manufacturers of heating appliances in Europe by recognizing the" best exporter "is the logical outcome of previous business activities, or are all employed itinski happy that the furnace commo declared the best new product that appeared on the market of Serbia in the previous year. This is confirmation that the only good teamwork leads to superior results. In this year's slogan of the event "the best in people," we recognize their own values we build our company. "

In 2015, "Alfa - Plam" a.d. won 2 prizes awarded by Chamber of Commerce and Industry of Serbia: "The best exporter" and "The introduction of a new brand - Commo".

Organized exclusive magazine TOP SERBIAN BRANDS bestofserbia.rs and portals, published the winners in 58 categories of traditional and prestigious awards:

TOP SERBIAN BRANDS - WINNER FOR 2015

Activities:

"Alfa-Plam is giving" - In January, within the New Year's activity that started in December the previous year, we continued implementation of the previously started activity. During its realization each buyer of solid fuel and pellet product received a gift package. In addition to the buyers, we also awarded retailers who took part in the selection of "The best salesman in Serbia", based on their delivered fiscal bill.

"Alfa-Plam corner" - Based on the visit of 517 retail stores in the country and previously set criteria, a selection was made that included 40 stores in which "Alfa-Plam corner" was realized. Goal of this action was sale stimulation by exposing different assortment and providing possibility for customers to directly get to know to our products. Besides the products, this action also included different marketing materials.

"New Year's action" - At the time of New Year's and Christmas holidays, "Alfa-Plam" a.d. gave special gift packages to the best retail sellers and distributors.

"GIZ project"

During 2016, in several cities across the country, was realized GIZ project with the goal of promoting the usage of firewood in households.

Residents of the visited cities, on this occasion, could meet the benefits of using biomass as a fuel, to get information in the ways of using firewoods, all the opportunities of saving, etc. The entire project was supported by the Regional Development Agency Zlatibor and Government of the Federal Republic of Germany.

Donations:

During 2016, we had investments in the community through different kinds of help and donations in accordance with the concept of social responsibility, such as help provided to the organization "Debra Leptirić" and the "Center for development of local services of social protection" in Vranje.

Sponsorships:

"Alfa-Plam" a.d. sponsored several concerts, shows and different manifestations in 2016.

Media advertising:

Several spots were made and published in 2016 as well as advertisement on local and regional tv and radio stations, and printed media.

Thematic Bulletin

The company Alfa-Plam as a socially responsible company, concerned about sustainable development and environmental protection. Thematic Bulletin E-gate dedicated to energy efficiency deals with the latest developments in the construction industry. As part of the heating system, the company Alfa-Plam highlights pellets as an environmentally clean fuel and lists the main benefits of heating with wood pellets:

Automatic system that provides complete comfort in the management and maintenance. High efficiency saves energy and avoiding environmental pollution. Low emissions and minimum amount of ash due to the characteristics of the fuel and the high capacity utilization in the whole system.

Easy transportation and storage of fuel.

All of the above characteristics indicate that the pellet fuel of the future. Think of environmental protection and energy saving because:

Energy efficiency - investing today, tomorrow, profit!

Developing a range of products whose operation is based on the use of renewable energy sources, Alfa-Plam a.d. wishes to answer to the needs of all customers that follow the trends and respect the requirements for the environmental protection. Beside the products, the whole quality managements system of the Company meets all the requirements of the SRPS ISO 9001/2008 standard (quality management system), whose consistent application implies: high level of quality of products and services, stable product development, higher market share, higher profit and easier implementation of the work assignments.

Occupational safety and health:

Alfa-Plam a.d. operates in compliance with the occupational safety and health policy which is verified by the certification of the Company for the application of the OHSAS (Occupational health and Safety) 18001/2005 Standard in 2014. This information is additionally verified by the fact that in 2014

Alfa-Plam a.d. was awarded the *28 April Charter* for the III place in the category of over 250 employees in the area of occupational safety and health for 2013, awarded by the Directorate for Occupational Health and Safety of the Republic of Serbia for the Day of Occupational Health and Safety in the Republic of Serbia.

In line with the adopted policies, conditions of the working environment are inspected periodically once in three years for the winter and for the summer period. Last inspections for the winter period were conducted in January 2012, next inspections are planned for January 2015. Last inspections for the summer period were conducted in 2013, next are expected in 2016. In 2016, tests were conducted with regard to chemical hazards in the department of glass gluing, with the measured value within acceptable limits. In addition, according to the plan for occupational health and safety for 2016, all tests and measurements designed with the plan were performed.

With the purpose of adequate protection, the employees are equipped with modern and high-quality protective equipment which is in line with the standards of the Republic of Serbia and international standards. With the use of this equipment, the risk for occurrence of injuries of employees is significantly smaller. In 2016 there were 8 injuries in total, of 6 minor and 2 severe injuries.

Environmental protection:

Alfa-Plam a.d. pays special attention to the implementation and enforcement of measures for environmental protection. In 2014, this was confirmed by certification of the Company for the application of ISO 14001: 2005 Standard, Environmental Management System.

As a socially responsible company Alfa-Plam a.d., in order to implement measures to protect the environment and reduce the impact on the environment, observes and implements all legislation such as:

- 1) The Law on Environmental Protection
- 2) The Law on Environmental Impact Assessment,
- 3) The Law on the Protection of the Nature,
- 4) The Law on the Air Protection,
- 5) The Law on the Waters Protection,
- 6) The Law on the Waste Management,
- 7) The Law on Packaging and Packaging Waste

The Company applies procedures and guidance that governs the application and enforcement of the above laws. Emissions of pollutants on technological and energy sources are regularly measured, obtained values with regard to the air quality are recorded. Sampling of the waste water quality is made on a quarterly basis, and the values obtained are reported to the competent state authorities in line with the legal obligation.

As for the waste management, there are places in the Company for temporary disposal of the waste, the waste is classified on the spot. The quantity of waste is duly recorded on a daily, monthly and annual basis. All types of waste that are generated in the Company are managed through authorised companies for collection, transportation, disposal, treatment and recycling of the w

DESCRIPTION OF MOST SIGNIFICANT RISKS AND CONTINGENCIES THAT THE COMPANY IS EXPOSED TO

The Company has the Rules on internal control and risk management in place. These Rules establish a system of internal controls, procedures for identifying, measuring, assessing and managing risks in the ALFA-PLAM's operation, all in order to increase the efficiency and effectiveness of the activities of the Company in the short- and long-term perspective.

Risk management is a set of practices and methods for risk identifying, measuring and monitoring, including the reporting on the risks that the Company is exposed to or could be exposed to in its operation. The main objective of the risk management is the identification, measurement, confinement and minimising of the expected and potential risks for the Company.

The objective of the Company in the field of risk management is to provide additional guarantees for achieving the strategic goals of the Company through timely identification / prevention of risks, to define effective measures and to ensure maximum effectiveness of the risk management.

In its operation, the Company is particularly exposed to the following risks:

1. **Market risk** - this is the risk of changes in market prices and terms of trade that lead to a lowering of the value of certain financial assets and their packages (portfolios). The market risk includes currency risk, price risk and interest rate risk.
2. **Credit risk** - this is the risk of occurrence of financial loss to the Company as a result of default by the clients or the counterparty in the settlement of contractual obligations. The credit risk is primarily linked to the Company's exposure arising from trade receivables, cash and cash equivalents, deposits in banks and financial institutions, investments in securities, other receivables from legal entities and natural persons.
3. **Liquidity risk** - this is the risk from the possibility of occurrence of negative effect on financial result and the capital of the Company due to inability of the Company to meet due obligations.
4. **Operational risk** - this is the risk of loss due to errors, interruptions or damage that may arise due to inadequate internal procedures, acting by people, systems or external events, including the risk of changes to the legal framework.
5. **Reporting risk** - includes accounting risk, but it is a broader concept because periodic reporting and communication of a company with the external environment and its stakeholders is not limited to the financial statements. Reporting risk, therefore, also applies to other opportunities like deceiving the potential investors by malicious reporting. Availability of information about a company is of the utmost importance and the Company continuously update the same. All information about the Company can be found on www.alfaplam.rs, and on the site of the Belgrade Stock Exchange where the Company regularly submits its financial statements on operation.

-
6. **Country risk and political risk** - refers to the risk of investing in a particular country, depending on changes in the business environment that may have a negative impact on the realisation of profits or the value of assets in that particular country. As examples of factors that influence the risk of the country the most often cited are the state control of the exchange rate, devaluation, changes in legislation, etc. In addition to these factors, the country risk is also influenced by the factors of (in)stability such as mass protests or civil war that could lead to an increase in operational risk for that company in that particular country. These risks are often associated with political changes, such as changes in macroeconomic policy and social policy, and they are also called political risks.
 7. **Environmental risk** - is defined as the risk of potential harm that the company may suffer due to environmental degradation by the company itself, or by another party if it can have an impact on its operations.
 8. **Compliance risk** - can be defined as the risk the current income and capital of the company to be exposed to losses resulting from violations or non-compliance with laws, rules, regulations, prescribed business practices, internal rules and procedures, and ethical standards.
 9. **Reputational risk** - is the risk of loss of current or future revenues and capital, because of the negative public opinion on the manner of operations of the company. It stems from a negative perception of the partners, shareholders, investors or regulators that could adversely affect the Company's ability to maintain the existing, or establish new business relationships and continued access to sources of funding. Reputational risk involves the inability to sufficiently meet the needs and expectations of customers or unreliable or inefficient delivery systems.

10. Other risks

For identification and assessment of risk that the Company is exposed to or could be exposed to, the following applies:

- Assessment of the financial and business position of the Company,
- Analysis of the external environment of the Company,
- Analysis of business processes and critical points in business processes,
- Analysis that refer to the placement of new product / market,
- Regular meetings of the management board of the Company, as well as meetings on lower levels,
- Reporting by the Company about performed activities for the own portfolio of the Company,
- Report by the internal auditor,
- Report of the function of monitoring of compliance with relevant regulations,
- Other internal records and reports (analysis of profitability, analysis of operative efficiency, analysis of growth potentials, analysis of the financial structure, DuPont system of analysis).

ALFA PLAM DEVELOPMENT STRATEGY

Mission

With common years of work we have created a company that is a leading manufacturer of heaters and stoves in South Eastern Europe. Reputation and tradition oblige us to continue our journey towards achieving the set goals.

Competence staff and possession of specific knowledge of modern technology and improved manufacturing processes make it possible to sell products that have a distinctive quality.

Vision

We are focused on strengthening our leadership position in existing and new markets, by creating a winning team composed of satisfied employees, shareholders, business partners and consumers, while respecting the principles of social responsibility.

In order to come to the ultimate satisfied partner - the consumer, our strategy relates to improving quality, reducing costs and respecting deadlines with the education of the employees.

We are ready now for everything that will happen tomorrow!

Strategy of quality of:

- Products
 - Services
 - Processes
-
- Increase of export > 30 mill. EUR/yr.
 - Decrease of complaints on the products for 50%
 - Sale of pellet and wood boilers in the quantity of over 3000 pieces per year
 - Implemented some of the Kaizen processes (5S, Total productive meaintenance, Kanban...)
 - Development of at least 4 product per year
 - Sale on new markets over 5 million EUR/yr.
 - Standard OHSAS 18001 - Occupational health and safety, and standard EMS 14001 - Environmental management system
 - Opening of retail shops and showrooms in largest cites in Serbia

Strategy of costs of

- Materials
 - Parts and services
 - Production costs
 - Non-production costs
 - Stocks
-
- Maintenance of the material, parts and services costs on the same level
 - Reduction of rejects and additional processing by 50%
 - Decrease of stock of materials and parts by 20%
 - Decrease of average annual values of finished goods stocks by 30%

Observance of deadlines

- Delivery to buyers
 - Finishing of production
 - Completion of projects in full and on time
-
- Average realisation of the monthly production plans 99%
 - Delivery of products to buyer within 2 days
 - Managing of project with clearly defined phases, project managers, communication and timely inclusion of necessary

Human resources

- Development
 - Training
 - Performance management
-
- Implemented system for reward and promotion to individual worker
 - Implemented system for merit-based annual increase of salaries (within the defined budget), not linear
